This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

REPORT.

TO THE RIGHT HONOURABLE

JOHN SINCLAIR, M.P.,

His Majesty's Secretary for Scotland.

General Registry Office of Births, &c.,
EDINBURGH, *July* 25, 1907.

Sir,

I had the honour in 1906, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to you as His Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1905, along with the usual Explanation and Commentary.

At the same time my Forty-first Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1905).

I have the honour to be,

Sir,

Your most obedient Servant,

STAIR AGNEW,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY JAMES CRAUFURD DUNLOP, M.D., F.R.C.P. (EDIN.).

SIR,

I have the honour to submit the Detailed Report regarding the Births, Deaths, and Marriages registered in Scotland during the year ending 31st December 1905.

The more salient features of the Report are that it records the lowest birth and death rates since the institution in Scotland of national registration, and a marriage rate which is lower than that of several years past.

At the suggestion of some Medical Officers of Health, I give as a special appendix a record of the infantile mortality rates in Scotland, in the Counties and in the Principal Towns, since the commencement of registration. In the earlier years of registration the infantile mortality rate was not calculated in the manner in which it now is, and consequently this appendix will fill a blank in the record of our national statistics.

POPULATION.

The population of Scotland as enumerated on the census day 1901 was 4,472,103—of whom 2,173,755 were male and 2,298,348 female. The population at the previous census, 1891, was 4,025,647—of whom 1,942,717 were male and 2,082,930 female. Assuming that the rate of increase found to have occurred between the census of 1891 and that of 1901 has continued, it is estimated that the population of Scotland in the middle of the year 1905 amounted to 4,676,603, of whom 2,280,085 were male and 2,396,518 female.

TABLE I.—Population of Scotland, in its Five Groups of Districts, by the Censuses of 1891 and 1901, and estimated to the middle of 1905.

FIVE GROUPS OF DISTRICTS.	CENSUS 1891.			CENSUS 1901.			Estimated to 30th June 1905.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
Principal Town .	800,032	872,732	1,672,764	942,139	1,014,422	1,956,561	1,011,836	1,083,080	2,094,916
Large Town	244,823	260,596	505,419	282,357	294,916	577,273	297,853	308,760	606,613
Small Town	380,566	408,364	788,930	437,400	459,090	896,490	460,808	479,457	940,265
Mainland-Rural .	459,646	475,495	935,141	456,807	468,303	925,110	455,605	465,279	920,884
Insular-Rural	57,650	65,743	123,393	55,052	61,617	116,669	53,983	59,942	113,925
SCOTLAND .	1,942,717	2,082,930	4,025,647	2,173,755	2,298,348	4,472,103	2,280,085	2,396,518	4,676,603

The population for the purpose of these reports is divided into five
of registration districts. The Principal Town Registration Districts i
the population of all towns which on last census day had a populat
over 30,000; the estimated population of these districts in the mid
1905 is 2,094,916, of whom 1,011,836 were male and 1,083,080 female.
Large Town Districts include the population of all towns which o
census day had a population of between 10,000 and 30,000; the esti
population of them in the middle of 1905 is 606,613, of whom 297,85
male and 308,760 female. The Small Town Registration Districts i
those registration districts which on the day of the last census con
towns having a population of between 2000 and 10,000; the populat
them in the middle of 1905 is estimated to have been 940,265, of
460,808 were male and 479,457 female. The Mainland-Rural Di
include all the mainland registration districts or parts of districts whi
not included in the above urban districts; the population of them
middle of 1905 is estimated at 920,884, of whom 455,605 were mal
465,279 female. The Insular-Rural Districts include the population
insular portions of Scotland other than what is included in the above
districts; the population of this group of registration districts f
middle of 1905 is estimated at 113,925, of whom 53,983 were mal
59,942 female.

The estimated population of the counties and divisions of countie
be seen in Table 5, and that of each of the principal towns in Table 4

The estimated population for 1905 is 48,947 more than that for
The natural increase, the excess of births over deaths from the mid
1904 to the middle of 1905 was 56,289. The difference between the
figures may be taken as an indication of the probable effect of emig
and immigration on the population during the period.

BIRTHS.

ible 1.* The births of 131,410 living children were registered in Scotland
the year 1905. These births are 1193 fewer than those registered in
but are 597 more than the average number of births registered duri
preceding ten years. They are fewer than were registered in an
since 1900, but are more than were registered in 1900, or in an
before then.

The birth-rate of the year per thousand of the estimated popula
found to be 28·10, a rate which is the lowest recorded for the cou
these reports. It is 0·55 lower than the birth-rate of 1904, and 1·54
than the mean of the birth-rates of the last ten years. Previous to
the birth-rate of Scotland was more than 30 per thousand, between
and 1903 it was in three years over 30, and in the remaining seven
over 29, but in 1904 it fell below 29, amounting to 28·65, and this ye
had a further fall to 28·10.

The national birth-rate of the year expressed as per thousand
estimated number of women of child-bearing age, 15 to 45, amounts to
a rate which is 2·2 lower than that of 1904, 4·2 less than the rate of
and 4·2 less than that of 1902.

ibles 2 Births registered during the year in the Principal Town Regis
d 3. Districts numbered 60,493, the birth-rate being 28·88. These birt
295 fewer than in 1904, and the rate is 0·61 lower. Births registe

---

* The References in the margin are to the Appendix Tables.

Districts numbered 18,451, the birth-rate being 30·42; fewer than those registered in these districts in 1904, ·52 lower than that of that year. Births registered istricts numbered 27,131, the birth-rate being 28·85; fewer than those registered in the previous year, and lower than the rate of that year. Births registered in the al Districts numbered 22,960, the birth-rate being 24·93. hs are 490 fewer than those registered in these districts in the year, and the birth-rate is 0·57 lower than the rate of that year. irths registered in the Insular-Rural Districts numbered 2375, and birth-rate was 20·85; these births are 60 fewer than those registered in ese districts in 1904, and the birth-rate is 0·40 lower. Thus in each of the groups of registration districts both the number of births registered and the birth-rate were less than in 1904, and the shrinkage of the national birth-rate appears to be due to a general shrinkage and not to a shrinkage in any one group of districts. The birth-rate in each of these groups of registration districts is lower than the corresponding birth-rate of all preceding years. In the Principal Town Districts the previous lowest was in 1904, when it was 29·49. In the Large Town Districts the previous lowest was in 1904, when it was 30·94. In the Small Town Districts the previous lowest was in 1903, when it was 29·26. In the Mainland-Rural Districts the previous lowest was in 1902, when it was 25·40. In the Insular-Rural Districts the previous lowest was in 1904, when it was 21·25.

The birth-rates of the divisions of the counties ranged from 31·26 in *Table* the South-Western to 21·44 in the North-Western. In the West-Midland it was 27·56, in the North-Eastern 27·42, in the South-Eastern 26·08, in the East-Midland 25·49, in the Southern 23·58, and in the Northern 21·61. In the Northern and Southern Divisions the birth-rate is slightly higher than it was in the previous year; in all the other divisions it is lower than it was in that year.

In the counties the birth-rate ranged from 35·05 in Linlithgow, 32·22 in Lanark, 31·29 in Stirling, and 30·02 in Dumbarton, to 17·95 in Bute, 18·17 in Sutherland, 18·76 in Argyll, 19·62 in Orkney, and 19·66 in Berwick. In four counties the birth-rate was more than 30 per 1000, in eleven

			Rate.	Relative Quantity, Scotland being=100.	Rate.	Relative Quantity, Scotland being=100.
SCOTLAND .	1,128,719	131,410	28·10	100	116·4	100
Principal Town	542,072	60,493	28·88	102·8	111·6	95·9
Large Town	144,395	18,451	30·42	108·3	127·8	109·8
Small Town	217,524	27,131	28·85	102·7	124·7	107·1
Mainland-Rural	200,098	22,960	24·93	88·7	114·7	98·5
Insular-Rural	24,630	2,375	20·85	74·2	96·4	82·

counties it was between 25 and 30 per 1000, in thirteen counties it was between 20 and 25 per 1000, in five counties it was less than 20 per 1000. In eleven counties the birth-rate of the year was higher than that of the previous year, 1904; in twenty-two counties the birth-rate was lower than in 1904.

ble 4. The birth-rate in the principal towns ranged from 38·03 in Hamilton to 23·01 in Edinburgh. In Coatbridge it was 36·74, in Motherwell 35·12, in Govan 32·59, in Partick 31·62, in Greenock 30·46, in Glasgow 30·02, in Leith 29·69, in Aberdeen 29·23, in Dundee 27·98, in Kilmarnock 27·73, in Paisley 27·70, in Kirkcaldy 25·26, and in Perth 23·97. In seven of these towns the birth-rate exceeded 30 per 1000, in six of them the rate was between 25 and 30 per 1000, while in two of them, Edinburgh and Perth, it was less than 25 per 1000. In Dundee, Leith, Greenock, Coatbridge, Perth, and Motherwell the birth-rate was higher in this than in the previous year, in each of the other principal towns it was lower than in that year.

Of the 131,410 children whose births were registered during the year, 66,750 were male and 64,660 female. Thus the proportion of male births to female births was 103·2 to 100. The birth-rate of male children per thousand of the estimated male population was 29·28, and of female children per thousand of the estimated female population 26·98 Both these rates are lower than the corresponding rates of the previous year, the male rate being 0·79 lower, and the female rate 0·33 lower.

The relative proportion of male to female births in Scotland during the year was 103·2 to 100, in the Principal Town Districts 103·2 to 100, in the Large Town Districts 103·8 to 100, in the Small Town Districts 102·3 to 100, in the Mainland-Rural Districts 103·6 to 100, and in the Insular-Rural Districts 106·5 to 100.

ble 1. Of the 131,410 births registered during the year, 9082, or 6·91 per cent., were illegitimate. Both the number of illegitimate births and the proportion of the total births which were illegitimate are greater in this than in the previous year. The illegitimate births are 72 more than in that year, and the illegitimate rate is 0·12 higher. The illegitimate births of 1905 are more than those recorded in any year since 1896, the illegitimate rate is higher than that of any year since 1897. Previous to 1903 the illegitimate rate was a steadily declining quantity, declining from 10·27 in 1866

TABLE III.—Births, 1905. Number of Legitimate, Illegitimate, and Total Births in Scotland, and its Five Groups of Districts, distinguishing the Sexes; also the number of Twin and Triplet Births.

GROUPS OF DISTRICTS.	TOTAL BIRTHS.			Legitimate Births.			Illegitimate Births.			Twin Births.	Triplet Births.
	Males.	Fem.	Both Sexes.	Males.	Fem.	Both Sexes.	Males.	Fem.	Both Sexes.		
Principal Town	30722	29771	60493	28639	27677	56316	2083	2094	4177	719	4

[illegible] .	66750	64660	131410	62139	60189	122328	4611	4471	9082	1619	17

to 6·21 in 1903, but an increase of the rate occurred in 1904, and a further increase again in this year.

Table 5

The illegitimate births registered in the Principal Town Districts numbered 4177, in the Large Town Districts 1041, in the Small Town Districts 1678, in the Mainland-Rural Districts 2071, and in the Insular-Rural Districts 115. The illegitimate rate ranged from 9·02 in the Mainland-Rural Districts, to 4·84 in the Insular-Rural Districts. In the Principal Town Districts it was 6·90, in the Small Town Districts 6·18, and in the Large Town Districts 5·64. In each of the three urban groups of registration districts the illegitimate rate was higher in this than in the previous year, but in the rural groups of registration districts it was lower than in that year.

In the divisions of the counties the illegitimate rate ranged from 11·81 in the North-Eastern and 11·25 in the Southern, to 5·02 in the West-Midland. In the Northern it was 7·85, in the East-Midland 7·25, in the South-Eastern 6·78, in the North-Western 6·20, and in the South-Western 5·85.

In the counties the illegitimate rate ranged from 13·29 per cent. in Wigtown, 13·05 in Banff, 12·78 in Caithness, 12·00 in Aberdeen, 11·96 in Elgin, and 11·69 in Kirkcudbright, to 3·14 in Kinross, 3·86 in Dumbarton, 4·38 in Renfrew, 4·44 in Stirling, 4·81 in Linlithgow, and 4·82 in Ross and Cromarty. In eight counties the rate exceeded 10 per cent., in seventeen counties it was between 5 and 10 per cent., in eight counties it was below 5 per cent. In seventeen counties this rate was higher than it was in the previous year, in sixteen it was lower than in that year.

Table

The illegitimate rate in the principal towns ranged from 9·85 in Dundee and 9·17 in Aberdeen, to 3·43 in Coatbridge, and 3·49 in Partick. In Edinburgh it was 8·23, in Glasgow 7·27, in Perth 7·07, in Kirkcaldy 6·33, in Greenock 5·42, in Kilmarnock 5·27, in Leith 4·78, in Paisley 4·77, in Govan 4·32, in Motherwell 3·96, and in Hamilton 3·57. In eight of these towns this rate was higher than in the previous year, the largest increase being in Kirkcaldy, while in seven of these towns the rate was lower than in that year, the largest diminution occurring in Hamilton.

Table

The legitimate birth-rate per thousand of the estimated number of married women of child-bearing age, 15 to 45, for the year was 258, which

---

TABLE IV.—Births, 1905. Birth-rate per 1000 of Population; Percentage of Illegitimate to the Total Births; Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; and Proportion of Mothers who bore Twins and Triplets; in Scotland, and its Five Groups of Districts, in 1905.

GROUPS OF DISTRICTS.	Births per 1000 of Population.	Percentage of Illegit. to Total Births.	Proportion of Males to every 100 Females in the			Proportion of MOTHERS who bore TWINS. — One in every	Proportion of MOTHERS who bore TRIPLETS. — One in every
			Total Births.	Legitimate Births.	Illegit. Births.		
Principal Town	28·88	6·90	103·2	103·5	99·5	83·1	14941·5
Large Town	30·42	5·64	103·8	103·2	113·8	79·2	4553·2
Small Town	28·85	6·18	102·3	102·3	103·6	80·5	6697·5
Mainland-Rural	24·93	9·02	103·6	103·4	105·3	77·1	5664·5
Insular-Rural	20·85	4·84	106·5	106·8	101·8	54·2	2330·0
SCOTLAND . .	28·10	6·91	103·2	103·2	103·1	80·1	7632·8

is 5 lower than that of the previous year and is the lc Scottish rate yet recorded. This rate ranged from 279 in Northern Division of the counties and 272 in the West-Midlan 237 in the South-Eastern, and 242 in the East-Midland. In the cou this rate ranged from 310 in Caithness, 308 in Linlithgow, and 28 Stirling, to 207 in Bute, 210 in Berwick, and 225 in Selkirk. In the cipal towns this rate ranged from 316 in Hamilton and 306 in Coatbr to 206 in Edinburgh, and 223 in Kirkcaldy.

The illegitimate birth-rate per thousand of the estimated numb unmarried and widowed women aged 15 to 45 for the year was 13·9, a which is the same as that for the previous year, and which ranged 23·3 in the North-Eastern Division of the counties and 16·7 in the Sc ern Division, to 9·2 in the North-Western, and 10·5 in the West-Mid In the counties this rate ranged from 27·3 in Banff and 24·5 in Caith to 5·6 in Kinross, and 6·8 in Shetland. In the principal towns this ranged from 18·1 in Motherwell and 17·8 in Aberdeen, to 8·1 in Pa and 8·3 in Paisley.

Of the 131,410 living children whose births were registered durin year, 3238 were twins, and 51 triplets. Mothers of living chi numbered 129,757; of them 1 in each 80 gave birth to twins, and 1 in 7633 to triplets; the former proportion is somewhat higher than in previous year, the latter proportion is lower. Of the children registe in each 41 was a twin, and 1 in each 2577 a triplet; the former propo is the same as in 1904, the latter is lower.

The average number of births registered daily throughout the year 360, which is 2 fewer than the daily average number registered during The daily average in May was 406, in June 392, in July 374, in March in April 371, in August 357, in January 347, in September 347, in F ary 346, in October 345, in December 333, and in November 328.

The birth-rate of the year in the United Kingdom was 26·9, in En and Wales 27·2, and in Ireland 23·4. The Scottish birth-rate of the is thus 1·2 higher than that of the United Kingdom, 0·9 higher than t England and Wales, and 4·7 higher than that of Ireland.

The following are the birth-rates of 1905 in some European countri Roumania 38·6, Servia 37·3, Hungary 35·7, Spain 35·3, Prussia 33·5, 32·3, Denmark 28·4, Norway 27·4, Switzerland 27·4, Belgium 26·1, Sw 25·7, and France 20·6.

MARRIAGES.

ble 1. Marriages registered in Scotland during the year 1905 numbered 31 a number which is 1001 fewer than were registered in the previous and 250 fewer than the average number registered during the prec ten years. Marriages registered in 1905 are fewer than those regis in any year since 1897. The marriage-rate for the year is 6·6 thousand, a rate which is 0·28 lower than that of the previous yea 0·45 less than the mean of the rates of the previous ten years. It is than the marriage-rate of any year since 1894.

bles 2 1 3. Marriages registered in the Principal Town Districts numbered 1 and the marriage-rate in those districts was 7·93; these marriages ar fewer than in the previous year, and the marriage-rate is 0·26 lower in that year. Marriages registered in the Large Town Districts num 4081, the marriage-rate in those districts was 6·73; this number is 18 than the corresponding number of the previous year, and the rate is 0·37 lower. Marriages registered in the Small Town Registration Districts numbered 5844, and the marriage-rate was 6·22; these marriages are 223 fewer than in the previous year, and this rate is 0·30 lower. Marriages registered in the Mainland-Rural Districts numbered 4382, and the marriage-rate was 4·76; these marriages are 258 fewer than those of the previous year, and the rate is 0·29 lower. Marriages registered in the Insular-Rural Districts numbered 351, and the marriage-rate was 3·08; these are 53 fewer than in the previous year, and the rate is 0·45 lower. It is thus evident that the low marriage-rate of the year is due to a comparatively small number of marriages being registered in each of these groups of registration districts, and that the decline of the marriage-rate is general throughout the country, and not due to a decline limited to one or more groups of these registration districts.

In the divisions of the counties the marriage-rate ranged from 7·21 in the South-Western and the same in the South-Eastern Divisions, to 4·43 in the Northern, and 4·45 in the North-Western. In the East-Midland Division it was 6·54, in the North-Eastern 6·33, in the Southern 6·17, and in the West-Midland 5·54. With the exception of the marriage-rate of the North-Western Division, that of each of these divisions is lower than it was in 1904. *Tabl*

In the counties the marriage-rate of the year ranged from 7·76 in Edinburgh, 7·56 in Lanark, 7·37 in Wigtown, and 7·31 in Selkirk, to 3·06 in Sutherland, and 3·75 in Argyll. In two counties the marriage-rate was less than four per thousand, in eight Counties it was between four and five per thousand, in ten counties it was between five and six per thousand, in nine counties it was between six and seven per thousand, in four counties it was more than seven per thousand.

In the principal towns the marriage-rate of the year ranged from 8·77 in Perth, 8·65 in Edinburgh, 8·60 in Glasgow, and 8·24 in Aberdeen, to 5·53 in Govan, 5·74 in Coatbridge, and 5·97 in Motherwell. In three of these towns the marriage-rate was between five and six per thousand, in four it was between six and seven, in four between seven and eight, and in four between eight and nine per thousand. *Tabl*

TABLE V.—Marriages, 1905. Number of Marriages contracted in Scotland and its Five Groups of Districts according to the Rites of the several Religious Denominations, and their Proportion to the Total Marriages in each Group.

ables 14 nd 15. Of the 31,270 marriages registered during the year, 27,669, or 88·5 per cent. were between bachelors and spinsters; 820, or 2·6 per cent. between bachelors and widows; 1996, or 6·4 per cent. between widowers and spinsters; 761, or 2·4 per cent. between widowers and widows; while in 24, or 0·1 per cent. of the total, the civil condition of one or both of the contracting parties was not stated. Marriages between bachelors and spinsters are 980 fewer than in the previous year, between widowers and spinsters 59 fewer, but those between bachelors and widows are 26 more, and between widowers and widows 9 more than in that year. Bachelors marrying during the year were 954 fewer than in the previous year, widowers marrying were 50 fewer, spinsters marrying were 1039 fewer, but widows marrying during the year were 35 more than in the previous year.

The average age of all bachelors married during the year was 27·6 years, of spinsters 25·6, of widowers 43·0, of widows 38·6, of all husbands 29·0, of all wives 26·3, and of all persons 27·6. The average age of bachelors marrying spinsters was 27·4, of bachelors marrying widows 34·1, of widowers marrying spinsters 41·3, and of widowers marrying widows 47·2. The average age of spinsters marrying bachelors was 25·1, of spinsters marrying widowers 33·0, of widows marrying bachelors 34·8, and of widows marrying widowers 42·8.

The average age of men marrying in the Principal Town Districts was 29·1, in the Large Town Districts 28·5, in the Small Town Districts 28·5, in the Mainland-Rural Districts 29·4, and in the Insular-Rural Districts 32·5. The average age of women marrying in the Principal Town Districts was 26·4, in the Large Town Districts 25·8, in the Small Town Districts 25·9, in the Mainland-Rural Districts 26·5, and in the Insular-Rural Districts 28·9.

Compared with the average age of persons marrying in the previous year, 1904, that of all men marrying in this year was 0·1 year more, and of all women 0·2 year less. The average age of men marrying in the Principal Town Districts was the same as in the previous year, but that of those marrying in the Small Town Districts was 0·2 more, in the Large Town Districts 0·3 more, and in the Mainland-Rural Districts 0·4 more, while in the Insular-Rural Districts it was 0·5 less. The average age of women marrying in the Principal Town Districts and in the Large Town Districts was 0·1 year more than in the previous year, while the average age of those marrying in the Small Town Districts and in each of the Rural Districts was 0·2 more.

In Tables on pages 26 to 35 there are given the comparative ages of all men and women marrying during the year. These Tables shew that while in the vast majority of marriages the ages of the contracting parties are very similar, yet in many instances wide differences occur. Thus, of bachelors marrying spinsters during the year, nine of between 40 and 50 married girls of under 20, and four of over 65 married women of under 40. Of the spinsters marrying bachelors, twelve of between 25 and 30 married boys of under 20, and one of over 65 married a bachelor of under 35. Of bachelors marrying widows, two aged 20 married widows of over 35, two under 25 married widows of over 40, and three bachelors of under 45 married widows of over 60. Of widowers who married spinsters, three aged over 40 married girls of less than 20, and two of over 65 married women of under 25. One widower of between 80 and 85 years old is recorded to have married a woman of under 60.

The youngest bachelors on the year's marriage registers were three of 16 years of age, the youngest widowers were thirty of between 21 and 25 years old, the youngest spinsters were one of 14 years of age and five of 15. The youngest widows were one of 17, one of 19, and three of 20. The oldest bachelors married during the year were one between 75 and 80, and one between 80 and 85. The oldest widowers married were two of over 80, and eight of between 75 and 80. The oldest spinsters married during the year were two of between 65 and 70, and one of between 70 and 75. The oldest widows married were two of between 70 and 75, and three of between 75 and 80.

Tables 1 and 13. When the proportions of the total marriages of the year in each age group are compared with those proportions of the total marriages registered in Scotland since the institution of national registration, 1855, it is found that this year's proportions for age groups under 25 and over 40 are smaller than those of the total marriages referred to, while the proportions between 25 and 35 are higher.

Tables 9 and 10. Of the 31,270 marriages registered during the year, 29,408, or 94·05 per cent., were celebrated according to the rites of religious denominations, while 1862, or 5·95 per cent., were irregular. The former are 1001 fewer than in the previous year, the latter are of the same number as in that year. The proportion of the total marriages celebrated according to religious rites is 0·18 lower than in the previous year, the proportion which were irregular marriages was 0·18 higher than in that year. In 1900, 1901, 1902, and 1903 the number of irregular marriages exceeded those registered in this year. The proportion of irregular marriages to the total, though higher than it was in the previous year, was exceeded in 1901 and 1902.

Marriages celebrated according to the rites of the Established Church numbered 14,245, according to those of the United Free Church 8240, according to those of the Roman Catholic Church 3376, according to those of the Episcopal Church 946, and according to the rites of other denominations 2601. Established Church marriages are 558 fewer than in the previous year, United Free Church marriages 536 fewer, Roman Catholic Church marriages 48 more, Episcopal Church marriages 21 more, and marriages according to the rites of other denominations 24 more than in that year.

The proportion of the total marriages celebrated according to the rites of the Established Church was 45·55 per cent., according to the rites of the United Free Church 26·35 per cent., according to the rites of the Roman Catholic Church 10·80 per cent., according to the rites of the Episcopal Church 3·03 per cent., and according to the rites of other denominations 8·32 per cent. The proportion in the Established Church is of normal amount; that in the United Free Church is less than in any year since the union of the Free and United Presbyterian Churches, and less than the proportions in these two churches combined in any year before the union; the proportion of the total in the Roman Catholic Church is the highest yet recorded, the previous highest being 10·78 in the year 1903; the proportion in the Episcopal Church is 0·16 higher than in the previous year, but is lower than that proportion in several past years.

Table 8. In the groups of registration districts the percentage of the total marriages celebrated according to the rites of the Established Church ranged from 67·94 in the Mainland-Rural, to 37·77 in the Principal Town Districts. In the Insular-Rural Districts it was 51·57, in the Small Town Districts 50·24, and in the Large Town Districts 45·99. In the counties this proportion ranged from 74·67 in Kirkcudbright and 73·59 in Kincardine, to 30·74 in Ross and Cromarty and 36·60 in Lanark. In the principal towns this proportion ranged from 48·74 in Kirkcaldy and 48·40 in Aberdeen, to 27·59 in Coatbridge and 34·21 in Paisley.

The proportion of the total marriages of the year celebrated according to the rites of the United Free Church ranged from 31·34 in the Insular-Rural Districts, to 23·46 in the Mainland-Rural Districts; in the Small Town Districts it was 29·71, in the Principal Town Districts 26·50, and in the Large Town Districts 23·62. In the counties this proportion ranged from 45·71 in Kinross and 44·10 in Orkney, to 16·98 in Kincardine and 20·00 in Kirkcudbright. In the principal towns the proportion ranged from 37·91 in Kirkcaldy and 34·36 in Kilmarnock, to 19·33 in Govan and 19·73 in Motherwell.

The proportion of the total marriages celebrated according to the rites of the Roman Catholic Church ranged from 14·61 per cent. in the Large Town Districts, to 2·58 per cent. in the Mainland-Rural Districts. In the Principal Town Districts it was 12·23, in the Small Town Districts 10·47, and in the Insular-Rural Districts 6·84. This proportion in the counties ranged from 22·70 in Dumbarton, 17·62 in Lanark, and 17·38 in Renfrew, to 0 in eight counties. In the principal towns this proportion ranged from 32·33 in Coatbridge, 22·87 in Motherwell, and 21·65 in Hamilton, to 2·32 in Aberdeen, 3·25 in Kirkcaldy, and 5·09 in Edinburgh.

The proportion of the total marriages which were celebrated according to the rites of the Episcopal Church ranged from 3·84 per cent. in the Principal Town Districts, to 0 in the Insular-Rural Districts. In the Large Town Districts it was 3·77, in the Small Town Districts 1·68, and in the Mainland-Rural Districts 1·28. In the counties this proportion ranged from 7·55 in Kincardine and 6·46 in Forfar, to 0 in Shetland, Sutherland, Nairn, and Kinross. In the principal towns this proportion ranged from 8·68 in Dundee and 6·67 in Edinburgh, to 1·38 in Govan and 1·44 in Kirkcaldy.

The proportion of the total marriages which were celebrated according to the rites of churches other than those already named—the Established Church, the United Free Church, the Roman Catholic Church, and the Episcopal Church—was 8·32 per cent., a proportion ranging from 10·17 in the Large Town Districts, to 4·74 in the Mainland-Rural Districts. In the Insular-Rural Districts it was 9·68, in the Principal Town Districts 9·12, and in the Small Town Districts 7·32. This proportion in the counties ranged from 37·22 in Ross and Cromarty, 26·15 in Sutherland, to 0 in Kinross and and 0·94 in Kincardine. In the principal towns this proportion ranged from 12·40 in Greenock and 12·07 in Coatbridge, to 5·36 in Edinburgh and 5·79 in Kilmarnock.

Of the total marriages 5·95 per cent. were irregular. This proportion ranged from 10·54 in the Principal Town Districts, to 0 in the Mainland-Rural Districts. In the Large Town Districts it was 1·84, in the Small Town Districts 0·58, and in the Insular-Rural Districts 0·57. In the counties this proportion ranged from 15·11 in Edinburgh and 8·80 in Lanark, to 0 in nine counties. In the principal towns this proportion ranged from 19·79 in Edinburgh and 12·78 in Glasgow, to 0·86 in Coatbridge and 0·90 in Motherwell.

Of the total marriages in Scotland 71·90 per cent. were in one or other of the two great Presbyterian churches. This proportion ranged from 91·40 per cent. in the Mainland-Rural Districts to 64·27 in the Principal Town Districts. In the Insular-Rural Districts it was 82·91, in the Small Town Districts 79·95, and in the Large Town Districts 69·61.

Of the 31,270 men married during the year, 30,765 signed the marriage register by writing, and 505, or 1·61 per cent. by the "mark." Of the 31,270 women married during the year, 30,592 signed the marriage register by writing, and 678, or 2·17 per cent., by the "mark." The number of illiterates marrying during the year is the smallest yet recorded in these reports; the previous smallest number of such men was in 1904, when it was 554, and the previous smallest number of such women was also in 1904, when it was 742. The proportions these illiterates form of the total married are also the smallest recorded, the previous smallest among men being 1·72 in 1904, and among women 2·30 in 1903 and in 1904. The number of men married during the year who used the "mark" is 49 fewer than in the previous year, and 128 fewer than the average number during the previous ten years; the number of such women is 64 fewer than in the previous year, and 252 fewer than the average number during the previous ten years. *Tables 1 and 15.*

The proportion of men using the "mark" ranged from 2·85 per cent. in the Insular-Rural Districts, to 0·75 per cent. in the Mainland-Rural Districts. In the Small Town Districts it was 2·10, in the Large Town Districts 1·72, and in the Principal Town Districts 1·62. The proportion of women using the "mark" for this purpose ranged from 5·70 in the Insular-Rural Districts, to 0·98 per cent. in the Mainland-Rural Districts. In the Small Town Districts this proportion was 3·29, in the Principal Town Districts 2·16, and in the Large Town Districts 1·57. In the counties this proportion of men married ranged from 4·82 in Bute and 3·08 in Sutherland, to 0 in nine counties, and the proportion of women using the "mark" ranged from 13·92 in Ross and Cromarty, 7·69 in Sutherland, 4·38 in Inverness, and 3·68 in Lanark, to 0 in six counties. In six counties, namely, Orkney, Caithness, Kinross, Peebles, Selkirk, and Kirkcudbright, all persons married during the year were able to sign the register by writing, and none of them required to use the mark. *Table 16*

The average number of marriages registered in Scotland daily throughout the year was 86. In June that average was 150, in July 131, in December 129, in January 114, in April 82, in September 72, in October 69, in November 64, in August 63, in February 61, in March 52, and in May 38.

The marriage-rate of the year, 1905, in the United Kingdom was 7·3, in England and Wales 7·6, and in Ireland 5·3. The Scottish rate is thus 0·6 lower than the rate of the United Kingdom, 0·9 lower than the English rate, but 1·4 higher than the Irish rate.

The following are the marriage-rates of the year in some European countries:—Servia 9·9, Hungary 8·5, Prussia 8·1, Belgium 7·9, Roumania 7·9, France 7·7, Italy 7·6, Switzerland 7·6, Holland 7·3, Spain 7·2, Denmark 7·1, Sweden 5·8, and Norway 5·8.

DEATHS.

Deaths registered in Scotland during the year 1905 numbered 74,536. They are 3445 fewer than the deaths registered in the previous year, 1904, and 3863 fewer than the average number registered annually in the previous ten years. They are fewer than the deaths registered in any year since 1896. Of the deaths, 37,196 were of males and 37,340 of females; the former are 1655 fewer than in the previous year, and the latter 1790 fewer. *Table 1,* *Table 1*

The death-rate of the year is 15·94 per thousand, a rate which is 0·91 lower than that of the previous year, 1·83 lower than the mean of the rates *Ta*

Table 18.

of the previous ten years, and is the lowest death-rate yet recorded for Scotland. It is 0·66 lower than the death-rate of 1903, which is the lowest previously recorded. The death-rate of the male population is 16·31, and of the female population 15·58; that of the male population is 0·92 lower than the corresponding death-rate of the previous year, and that of the female population 0·91 lower than the death-rate of the female population of the previous year.

Tables 2 and 3.

Deaths registered in the Principal Town Registration Districts numbered 34,980, the death-rate of those districts being 16·70. Deaths in the Large Town Districts numbered 9883; in them the death-rate was 16·29. Deaths in the Small Town Registration Districts numbered 14,061, the death-rate being 14·95. Deaths in the Mainland-Rural Registration Districts numbered 13,824, the death-rate in them being 15·01. Deaths in the Insular-Rural Districts numbered 1788, the death-rate in them being 15·69. The deaths in each of these groups of registration districts, Insular-Rural excepted, were fewer in 1905 than in the previous year. The death-rate in each of these groups of registration districts, Insular-Rural excepted, is lower than in 1904; in the Principal Town Districts it is 1·27 lower, in the Large Town Districts 0·99 lower, in the Small Town Districts 0·67 lower, in the Mainland-Rural Districts 0·51 lower, but in the Insular-Rural Districts it is 0·54 higher. In each of the three urban groups of districts the death-rate is the lowest recorded, in the Mainland-Rural Districts it is the lowest with the exception of that of 1896, but in the Insular-Rural Districts there are several lower death-rates recorded.

In a supplement to the Detailed Annual Report of 1904 attention was directed to the fact that a noticeable feature of the death-rates of recent years is that the difference between the urban and rural death-rates is a diminishing quantity. There is a further diminution of this difference in this year's statistics, for the difference between the death-rate of the Principal Town Districts and that of the Mainland-Rural Districts is only 1·69 per thousand, a difference which is smaller than that of any previous year, the previous smallest being in 1904, when it was 2·45.

Table 5.

The death-rate in the divisions of the counties ranged from 16·57 in the South-Western, to 15·05 in the West-Midland. In the Northern it was 16·44, in the North-Western 16·16, in the Southern 15·72, in the East-

TABLE VI.—Showing Deaths and Death-rates in the Groups of Registration Districts in 1904 and 1905.

	1905.			1904.		
	Population.	Deaths.	Death-rate.	Population.	Deaths.	Death-rate.
Principal Town Districts, -	2,094,916	34,980	16·70	2,061,296	37,033	17·97
Large Town Districts -	606,613	9,883	16·29	601,565	10,398	17·28
Small Town Districts, -	940,265	14,061	14·95	930,593	14,540	15·62
Mainland-Rural Districts, -	920,884	13,824	15·01	919,637	14,274	15·52
Insular-Rural Districts -	113,925	1,788	15·69	114,565	1,736	15·15
SCOTLAND, - - -	4,676,603	74,536	15·94	4,627,656	77,981	16·85

Midland 15·67, in the South-Eastern 15·36, and in the North-Eastern 15·09. Compared with the death-rates of the previous year, those of each of these divisions of the counties are lower, except that of the Northern Division, which is slightly higher.

In the counties the death-rate of the year ranged from 17·43 in Caithness, 17·27 in Dumfries, 16·93 in Shetland, and 16·92 in Lanark, to 12·53 in Peebles, 12·57 in Berwick, 12·96 in Kincardine, and 13·51 in Kinross. In two counties the death-rate was more than 17, in eight counties it was between 16 and 17, in ten it was between 15 and 16, in eight it was between 14 and 15, in two between 13 and 14, and in three less than 13.

In the principal towns the death-rate ranged from 18·79 in Greenock, *Table 4.* 17·99 in Dundee, and 17·85 in Glasgow, to 12·67 in Partick, 13·64 in Kirkcaldy, and 13·86 in Motherwell. In Hamilton it was 17·12, in Perth 17·07, in Coatbridge 16·21, in Aberdeen 16·17, in Edinburgh 16·13, in Paisley 16·10, in Kilmarnock 15·62, in Govan 14·27, and in Leith 13·95. Compared with the death-rates of these towns in the previous year, with the exception of those of Greenock, Kirkcaldy, and Hamilton, they are *Table 21* all lower. Compared with the mean of the death-rates of these towns in the previous ten years, they are all without exception lower. That of Motherwell is 3·9 lower, of Coatbridge 3·5 lower, of Paisley and Leith each 3·4 lower, of Glasgow 3·0 lower, of Partick 2·8 lower, of Edinburgh 2·5 lower, of Dundee and Govan each 2·4 lower, of Aberdeen and Kilmarnock each 2·1 lower, of Perth 1·9 lower, of Kirkcaldy and Hamilton each 1·4 lower, and of Greenock 0·6 lower.

When the death-rates of the counties are corrected—that is, adjusted so *Table 19* as to allow for the differences of the age and sex distribution of the population—it is found that the highest county death-rates of the year were in Renfrew 19·00, Lanark 18·01, Edinburgh 16·62, Forfar, 16·29, and Dumbarton 16·29; and the lowest death-rates in Kinross 11·01, Berwick 11·48, Orkney 11·60, Kincardine 11·70, and Sutherland 11·79.

The corrected death-rates of the principal towns ranged from 19·77 in Glasgow, 19·74 in Greenock, and 18·96 in Dundee, to 13·97 in Partick, 14·27 in Kirkcaldy, and 14·82 in Leith. In Hamilton it was 17·97, in Coatbridge, 17·54, in Perth 17·13, in Paisley 16·85, in Edinburgh 16·80, in Kilmarnock 16·57, in Aberdeen 16·06, in Govan 15·74, and in Motherwell 15·29.

In five counties the corrected death-rate was higher than that of Scotland, namely, in Renfrew, Lanark, Edinburgh, Forfar, and Dumbarton; in the remaining 28 counties the corrected death-rate was lower than the national rate. In five of the principal towns the corrected death-rate was less than the national death-rate, namely, in Govan, Motherwell, Leith, Kirkcaldy, and Partick; in the remaining 10 principal towns the correctad death-rate was higher than the national death-rate.

Of males dying during the year, 12,997, or 34·94 per cent., were aged *Tables 2* less than five years; 972, or 2·61 per cent., were aged between five and ten; *and 24.* 672, or 1·81 per cent., between ten and fifteen; 910, or 2·45 per cent., between fifteen and twenty; 2180, or 5·86 per cent., between twenty and thirty; 2388, or 6·41 per cent., between thirty and forty; 2918, or 7·85 per cent., between forty and fifty; 3685, or 9·91 per cent., between fifty and sixty; 4642, or 12·48 per cent., between sixty and seventy; while 5819, or 15·64 per cent., were aged more than seventy.

The death-rate of males per thousand of the estimated male population *Table 2* of the year was 16·31. For those under five, 46·17; between five and ten, 7 were men and 14 women. The oldest men were a crofter aged 104, and man of unstated occupation aged 103. The oldest women were one of 106, two of 103, and one of 102.

The average number of deaths registered daily throughout the year was 204. In January that daily average was 242, in February 230, in March 222, in May 216, in November 212, in April 209, in December 202, in June 193, in October 190, in July 182, in August 181, and in September 172.

The death-rate of the United Kingdom for the year was 15·5, of England and Wales 15·2, and of Ireland 17·1. The Scottish death-rate of the year is thus 0·4 higher than that of the United Kingdom, 0·7 higher than that of England and Wales, but 1·2 lower than the Irish death-rate.

The following are the death-rates of the year in some European countries:—Norway 14·8, Denmark 15·0, Holland 15·3, Sweden 15·6, Belgium 16·5, Switzerland 17·9, France 19·6, Prussia 19·6, Italy 21·7, Servia 24·4, Roumania 25·0, Spain 25·9, Hungary 27·8.

CAUSES OF DEATH.

able 40. Of the total deaths registered in Scotland during the year 72,795, or 97·7 per cent., were certified as to the cause of death by a qualified medical practitioner or by a procurator-fiscal, while 1741, or 2·3 per cent., were not so certified. The percentage of deaths uncertified is 0·1 lower than the corresponding percentage of the previous year, and 0·4 lower than the mean of these percentages of the previous five years.

The percentage of deaths uncertified ranged from 28·8 in the Insular-Rural Districts to 0·9 in the Large Town Districts. In the Small Town Districts it was 1·1, in the Principal Town Districts 1·4, and in the Mainland-Rural Districts 3·5. Compared with the mean of the last five years each of these percentages is less. In the divisions of the counties this rate ranged from 21·5 in the North-Western and 16·3 in the Northern, to 0·5 in the Southern and 0·9 in the East-Midland and South-Western. In the counties this rate ranged from 26·4 in Sutherland, 26·0 in Shetland, and 24·5 in Ross and Cromarty, to 0 in Peebles, Selkirk, and Roxburgh. In the principal towns this rate ranged from 4·0 in Edinburgh and 3·5 in Paisley, to 0 in Coatbridge and 0·1 in Dundee.

'able 40a. An analysis of these 1741 uncertified deaths is given in Table 40A. In 1579 of them the cause of death was stated, but in 162, or 9·3 per cent., the cause of death was not stated. The largest number of these deaths ascribed to one cause was 505, or 29·0 per cent., which were ascribed to old age; of these 230 were in the Mainland-Rural Districts, 202 in the Insular-Rural Districts, and only 73 in the three urban groups of districts combined. Next in frequency to the deaths from old age are those attributed to premature birth debility; they number 161, and constitute 9·2 per cent. of the total uncertified; of them 146 were in the urban districts, and only 15 in the rural districts. Among other causes of death attributed to these uncertified causes were atrophy and debility 120, tubercle 106, including 89 cases of phthisis, heart disease and syncope 96, bronchitis 86, pneumonia 65, convulsions 40, apoplexy 19, measles 17, malignant disease 17, and violence 11.

In the rural districts the frequency of these uncertified deaths may probably be rightly attributed to want of available medical assistance. In a town such as Edinburgh, where the proportion of uncertified deaths is comparatively high, it cannot be attributed to that cause, but it is to a considerable extent attributable to the fact that a large section of the poor of the town are medically attended by senior medical students conducting under supervision the out-door work of the charitable dispensaries, and their certificates, though often as good as those of fully qualified men, cannot be accepted as certificates in terms of the Registration Act. A comparison of the analysis of the Edinburgh uncertified deaths with the Insular-Rural uncertified deaths demonstrates this point, for of the 219 uncertified deaths in Edinburgh, only seven are attributed to ill-defined causes such as debility, old age, and the like, while of the 515 uncertified Insular-Rural deaths no fewer than 289 are attributed to such causes.

In an endeavour to make the information as satisfactory as possible, letters of enquiry were during the year freely used in all cases where there were doubts as to the classification of the certified causes of death, or where there were doubts as to the interpretation of the nomenclature used. By this means special information was received in 963 cases. These letters, among other cases, dealt with 180 cases of "tumour," 128 of syncope, 105 of paralysis, 94 of old age in which the stated age was less than sufficient to account for a death from that cause, 62 of debility, atrophy, or such like term, 58 of general paralysis other than reported dying in lunatic asylums, 38 from natural causes, and 22 from convulsions. By these enquiries 168 cases of malignant disease were discovered, 91 cases of apoplexy, 34 cases of alcoholism, 31 cases of tuberculosis, 10 of syphilis, and a varying number of other diseases. In the replies to queries regarding cases certified as dying of old age at comparatively early age, a frequent answer was to the effect that the relatives must have deliberately understated the age and have done so for purposes connected with life assurance. Of the 105 enquiries regarding deaths certified as due to paralysis, 73 transpired to be due to apoplexy, 14 to softening of the brain, 2 to syphilis, 1 to alcoholism, and only 9 to diseases of the spinal cord. Of the 58 cases of general paralysis enquired into, 34 transpired to be genuine cases of general paralysis, *dementia paralytica*, while that term in the remaining 24 cases was found to refer to other conditions such as the paralysis of alcoholism, that of syphilis, of softening of the brain, of apoplexies and of other diseases of the brain and spinal column.

The total number of deaths during the year in which the cause of death was not stated was 451; these are 170 fewer than in the previous year, 222 fewer than in 1903, 253 fewer than in 1902, and 274 fewer than in 1901, and would appear year by year to be a diminishing quantity. They now amount to less than 0·6 per cent. of the total deaths.

Tables
32,33, a
34.

Of the 74,085 deaths of which the cause was specified, 4725, or 6·4 per cent., were ascribed to diseases of the nervous system; 12,173, or 16·4 per cent., to diseases of the circulatory system; 5646, or 7·6 per cent., to diseases of the respiratory system; 4989, or 6·7 per cent., to diseases of the digestive system; 2223, or 3·0 per cent., to diseases of the urinary system; 176, or 0·2 per cent., to diseases of the reproductive system; 450, or 0·6 per cent., to diseases and accidents of parturition other than septic infection; 237, or 0·3 per cent., to diseases of the locomotor system; 106, or 0·1 per cent., to diseases of the skin; and 2949 or 4·0 per cent., to violence.

Table 35

Deaths from small-pox during the year numbered 4. This is the smallest number of such deaths recorded in any year since 1899, when there was only one such death. In the previous year, 1904, these deaths numbered

185. Of the 4 deaths recorded this year, two were of persons who had
vaccinated and two of persons who had not been vaccinated. Of
deaths, one was in Glasgow, one elsewhere in Lanarkshire, one in Du
tonshire, and one in Stirlingshire.

"Fevers" were the ascribed cause of 431 deaths; of them 44 were
typhus, 373 from enteric, two from cerebro-spinal, and 12 from ill-d
fever. These deaths collectively are one fewer than in the previous

Deaths from typhus fever numbered 44, which is 30 more than
previous year and more than in any year since 1898. The excess of
deaths is accounted for by limited epidemics of this disease in Glasgo
in Aberdeen. The death-rate from this cause in Scotland amounte
per 100,000, in Aberdeen 8 per 100,000, and in Glasgow 2 per 100,00

Deaths from enteric fever numbered 373, which is 37 fewer than
previous year and smaller than the number of such deaths recorded i
previous year. The national death-rate from this cause was 8 per 10
Table 36. a rate which is the lowest Scottish death-rate from that cause yet rec
and which ranged from 16 in the Large Town Districts, to 5 in the
land-Rural Districts. In the Insular-Rural Districts it was 8, i
Principal Town Districts 7, and in the Small Town Districts 7.
principal towns this death-rate ranged from 30 in Greenock and
Paisley and Motherwell, to 0 in Kirkcaldy and 2 in Aberdeen, Gova
Partick.

Deaths from measles during the year numbered 1662, which is 150
than in the previous year and 159 more than the average number
the previous five years. The national death-rate from this cause amo
to 36 per 100,000, a rate which ranged from 51 in the Principal
Districts, to 6 in the Insular-Rural Districts. In the Large and
Town Districts it was 30, and in the Mainland-Rural Districts 13.
principal towns this rate ranged from 80 in Greenock, 72 in Govan and
Table 30. Glasgow, to 12 in Leith and 19 in Aberdeen. Of the deaths from m
93·1 per cent. were of children of under five, and only 1·6 per c
persons over ten years old.

TABLE VII.—Deaths from Small-pox in Scotland, 1855-1905.

YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.
1855	1,309	1872	2,448	1889	8
1856	1,306	1873	1,126	1890	0
1857	845	1874	1,246	1891	0
1858	332	1875	76	1892	11
1859	682	1876	39	1893	68
1860	1,495	1877	38	1894	129
1861	766	1878	4	1895	47
1862	426	1879	8	1896	2
1863	1,648	1880	10	1897	10
1864	1,741	1881	19	1898	2
1865	383	1882	3	1899	1
1866	200	1883	11	1900	53
1867	100	1884	14	1901	278
1868	15	1885	39	1902	80
1869	64	1886	24	1903	41
1870	114	1887	17	1904	185
1871	1,442	1888	3	1905	4

Hooping-cough was, as is frequently the case, the most fatal of the infectious diseases. To it 2243 deaths were ascribed. These are 162 fewer than in the previous year, but 107 more than the average number in the previous five years. The death-rate from hooping-cough in Scotland was 48 per 100,000, in the Principal Town Districts 60, in the Large Town Districts 55, in the Insular-Rural Districts 46, in the Small Town Districts 40, and in the Mainland-Rural Districts 27. In the principal towns this rate ranged from 103 in Govan and 79 in Glasgow, Greenock, and Hamilton, to 13 in Kirkcaldy and 20 in Aberdeen and Coatbridge. Of those dying from hooping-cough, 96·4 per cent. were of less than five years old, and only 0·3 per cent. of persons of over ten.

Deaths from scarlet fever numbered 211; they are 66 fewer than in the previous year, 280 fewer than the average number in the previous five years, and are the smallest number yet recorded as occurring in any one year. The national death-rate from this cause was 5 per 100,000, a rate which is the lowest yet recorded, and which ranged from 6 in the Large Town Districts, to 3 in the Small Town Districts. In the Principal Town and Insular-Rural Districts it was 5, and in the Mainland-Rural Districts 4. In the principal towns this rate ranged from 31 in Greenock and 7 in Aberdeen, to 0 in Govan, Partick, Coatbridge, and Kirkcaldy. Of those dying from scarlet fever, 85·3 per cent. were less than ten years old.

TABLE VIII.—Deaths from Fever in 1905.

TABLE IX.—Monthly Deaths from Fever in Eight of the Principal Towns of Scotland during the Ten Years 1896–1905; specifying those from Typhus and Enteric Fever.

MONTHS.	Total Fever Deaths.	Typhus.	Enteric.	MONTHS.	Total Fever Deaths.	Typhus.	Enteric.
January .	210	14	191	July . .	204	10	188
February .	213	25	180	August .	221	7	209
March .	197	18	175	September .	306	16	292
April . .	190	15	172	October	324	12	304
May . .	174	16	152	November .	280	17	259
June . .	159	12	145	December .	244	25	214

Deaths from diphtheria and croup numbered 721; they are 29 fewer than in the previous year and 97 fewer than the average number for the previous five years, and are the smallest number yet recorded for any year with the exception of 1903. The death-rate from these causes for the entire country was 16 per 100,000, in the Insular-Rural Districts 21, in the Large Town Districts 19, in the Principal Town Districts 15, in the Small Town Districts 15, and in the Mainland-Rural Districts 14. Of these 721 deaths, 657 were registered as due to diphtheria, and 64 as due to croup. Of those dying from diphtheria, 70 per cent. were under five years old.

ible 37. In 912 deaths influenza was stated to be the primary cause of death, and in 115 a secondary or contributing cause. The former are 238 more than in the previous year, and the latter 61 more. The deaths of which influenza was the primary cause are equivalent to a death-rate of 20 per 100,000, a rate which is 5 higher than in the previous year, and which ranged from 56 in the Insular-Rural Districts, to 15 in the Principal and Large Town Districts. These deaths were most frequent in the months of January, February, and March. Nairn is the only county in which no deaths from influenza were recorded. Of the deaths from influenza, 53·7 per cent. were of persons of over sixty.

Deaths from diarrhœal diseases numbered 2945; they are 213 fewer than in the previous year and 292 fewer than the average number during the previous five years. These deaths include 294 certified as due to epidemic diarrhœa or infective enteritis, 909 as due to diarrhœa or choleraic diarrhœa, 23 as due to dysentery, 776 as due to enteritis (not infectious), and 943 as due to gastro-enteritis. The death-rate from these causes amounted to 63 per 100,000, which is 6 lower than the rate of the previous year and 9 lower than the mean of the death-rates from these causes during the previous five years. Of the deaths from diarrhœal diseases, 80·4 per cent. were of children of less than five years old.

Deaths from diseases and accidents connected with pregnancy, including these from puerperal septic conditions, numbered 718; they are 103 more than in the previous year, and are equivalent to a mortality rate of 5·5 per thousand living children born. In the previous year that rate was 4·6. In the Insular-Rural Districts this rate was 5·9 per thousand births, in the Principal Town Districts 5·7, in the Small Town Districts 5·5, in the Large Town Districts 5·4, and in the Mainland-Rural Districts 4·9. In the principal towns this rate ranged from 9·1 in Motherwell, 8·6 in Hamilton, and 8·5 in Perth, to 1·2 in Leith, 3·4 in Coatbridge, and 4·2 in Kirkcaldy. In Glasgow it was 6·5, and in Edinburgh 5·8.

The total deaths ascribed to tuberculous disease numbered 9619; they constituted 13 per cent. of the total deaths, and are equivalent to a death-rate of 207 per 100,000. These deaths are 539 fewer than in the previous year, and 314 fewer than the average number during the previous five years. The death-rate from this cause is 14 lower than that of the previous year, and the same amount lower than the mean of the rates of the previous five years. In the Large Town Districts the death-rate from this cause was 231, in the Principal Town Districts 223, in the Small Town Districts 187, in the Insular-Rural Districts 182, and in the Mainland-Rural Districts 178. In the principal towns this rate ranged from 297 in Hamilton, 260 in Dundee, and 250 in Paisley, to 143 in Partick, 160 in Kirkcaldy, and 175 in Govan. The total deaths from tuberculous disease include 1723 ascribed to pulmonary tuberculosis, 4651 to phthisis (not otherwise defined), 1159 to tuberculous meningitis, 712 to tuberculous peritonitis, 293 to tabes mesenterica, 14 to lupus, 294 to tubercle of other organs, 756 to general tuberculosis, and 17 to scrofula. Of the persons dying from tuberculosis during the year, 63·4 per cent. were between fifteen and sixty years old, and 20·5 per cent. less than five years old.

Malignant disease was the stated cause of death in 4132 instances. These are 212 more than in the previous year and 413 more than the average of the previous five years. These deaths constituted 5·6 per cent. of the total deaths in the country. The death-rate from these diseases amounted to 89 per 100,000, the death-rate among males being 70, and among females 107. The death-rate from malignant disease in the Mainland-Rural Districts was 99, in the Principal Town Districts 92, in the Large Town Districts 80, and in the Small Town and Insular-Rural Districts 79. In the principal towns this death-rate ranged from 135 in Edinburgh, 127 in Perth, and 124 in Dundee, to 44 in Partick, 48 in Motherwell, and 52 in Govan.

Of the deaths ascribed to malignant disease, 1984 were stated to be due to carcinoma, 244 to sarcoma, and 1904 to other forms of malignant tumour or to tumours described as cancer, but they do not include deaths ascribed to tumours not described as malignant, as for example tumours of the stomach, brain, and ovary.

The organs affected by the malignant growths which proved fatal during the year are shown in Table 38. The most common sites for cancerous growths among males were the stomach, 412 during the year, the liver 181, the intestines 160, and the rectum 131; and among females, the stomach 496, the uterus 437, the breast 334, the liver 329, the intestines 245, and the rectum 106. *Table 38*

Deaths from pneumonia numbered 6672; they constituted 9·0 per cent. of the total deaths; they are 312 fewer than in the previous year, but 174 more than the average number during the previous five years. The death-rate from pneumonia was 144 per 100,000, a rate which is 8 lower than that of the previous year, but is the same as the mean of the death-rates from this cause during the previous five years. The death-rate from pneumonia in the Principal Town Districts was 172, in the Large Town Districts 144, in the Small Town Districts 123, in the Mainland-Rural Districts 104, and in the Insular-Rural Districts 103. In the principal towns this death-rate ranged from 214 in Glasgow, 200 in Greenock, and 189 in Govan, to 101 in Hamilton, 109 in Perth, and 116 in Partick and Kilmarnock. Of those dying from pneumonia 48·3 per cent. were under five years old, 28·8 per cent. between fifteen and sixty, 19·7 per cent. were over sixty, and 3·2 between five and fifteen.

Deaths from bronchitis numbered 4821, and constituted 6·5 per cent. of the total deaths; they are 877 fewer than the number recorded in the previous year, and 1168 fewer than the average number recorded during the previous five years. The death-rate from bronchitis amounted to 104 per 100,000, a rate which is 20 lower than that of the previous year, and 29 less than the mean of the rates of the previous five years. This death-rate in the Principal Town Districts was 120, in the Large Town Districts 106, in the Small Town Districts 91, in the Mainland-Rural Districts 81, and in the Insular-Rural Districts 75. In the principal towns this rate ranged from 169 in Hamilton, 145 in Dundee, and 143 in Paisley, to 74 in Kilmarnock, 79 in Edinburgh, and 83 in Kirkcaldy. Of those dying from bronchitis, 34·8 per cent. were under five, and 46·5 per cent. over sixty.

Deaths from apoplexies numbered 4295, the death-rate from these causes being 92 per 100,000. These deaths are 70 more than in the previous year, but the death-rate from them is the same as in that year.

Among other specified causes of death during the year were 7295 from diseases of the heart, 4878 from diseases of blood vessels, 2259 from premature birth debility, 610 from congenital defects, 1677 from nephritis and Bright's disease, 449 from anæmia, and 319 from diabetes.

Deaths from violent causes numbered 2949 and constituted 4·0 per cent. of the total deaths; they number the same as in the previous year. The death-rate from these causes amounted to 63 per 100,000, a rate which is 1 lower than that of the previous year. This rate in the male population was 94, and in the female population 34. In the Principal Town Districts this death-rate was 70, in the Insular-Rural Districts 66, in the Large Town and Mainland-Rural Districts 60, and in the Small Town Districts 53. In the principal towns this death-rate ranged from 110 in Coatbridge, 86 in Glasgow, and 85 in Leith, to 25 in Partick, 35 in Hamilton, and 38 in Motherwell.

Of the deaths from violent causes, 2617 were accidental, 305 suicidal, 26 homicidal, and 1 penal.

Of the accidental deaths, 498 were caused by drowning, 328 by burns and scalds, 315 by vehicles and horses, 216 by falls, 173 by suffocation, 143 by accidents in mines and quarries, 101 by overlaying, 86 by poisons and poisonous vapours, 56 by weather agencies, 47 by accidents on ships, boats, or at docks, 43 by machinery, 30 by building operations, 11 by weapons and implements, and 570 by other or not specified means.

Among the accidental deaths from poisons there were 13 from laudanum, 17 from chloroform, 6 from carbolic acid, 7 from coal gas, 7 from opium, 5 from alcohol, 3 from oxalic acid, 2 each by strychnine, salts of sorrel, ammonia, phosphorus, carbonic acid gas, and liniments containing belladonna, and 1 each from camphorated oil, ethyl chloride, carbon monoxide, belladonna, bichloride of mercury, rectified spirit, and laburnum vulgare.

'able 39. Among the deaths from suicide were 20 on railways, 23 by gunshot, 74 by cutting and stabbing, 12 by precipitation, 54 by drowning, 92 by hanging, 27 by poison, and three by other or unstated means. Of the suicidal poisonings, 6 were by carbolic acid, 6 by laudanum or opium, 4 by prussic acid, 2 by oxalic acid, 2 by hydrochloric acid, and 1 each by bichromate of potassium, coal gas, potassium cyanide, A.B.C. liniment, and strychnine.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

llowing remarks on the weather of the year are the Notes made
e Dr. Buchan, under the direction of the Council of the Scottish
gical Society, which appear in the Registrar-General's Quarterly
—

onth of *January* was characterised by a very high mean barometric
; a high mean temperature, with a slightly high mean daily range;
an hur an extremely low mean rainfall, with one less than
ge r ainy days; a considerable excess of strong winds

ressure was 30·027 inches, or 0·224 inch above
d 17th a very deep depression occurred, minor
nonth and on 30th. From 18th to 31st the

barometer was unusually high, except during a rapid fall on 30th. The monthly range was large, the sea-level extremes at Leith being 30·750 inches at 9 p.m. on 28th, and 28·951 inches at 9 a.m. on 17th.

The mean temperature was 39°·5, or 2°·2 above the normal, the days being 2°·5 and the nights 1°·8 above their respective averages. In all districts the month was decidedly warmer than usual, being on the whole the mildest January since 1898. Very mild weather was experienced during the first few days, the mean temperature of the first week being at many places 6°·0 or 7°·0 above the normal. Highest readings for the month occurred at most stations between 4th and 8th, generally on the 6th; but at a few on 28th or 30th. Frosts occurred about 10th, 17th, 21st, and 26th, but were never severe or prolonged. Lowest temperatures were generally recorded on night of 16th. In the latter part of the month, temperature in Scotland was, as a rule, notably higher than that in England. Thus, during the third week the mean temperature of Aberdeen was nearly 5°·0 above that of London, and during the fourth week the nights at Braemar were 4°·0 warmer than those at Bath. The absolute maximum was 57°·0 at Airds on 9th, and the minimum 15°·0 at Leadhills on 17th.

The mean rainfall was 2·40 inches, or 38 per cent. below the normal. In Orkney and Shetland, at Stornoway, and, on the mainland, at Dunrobin, Lairg, and Glencarron, rainfall was much above the average, the excess at Lairg amounting to nearly 70 per cent.; whilst in the greater part of Inverness-shire about the average amount was recorded. Elsewhere there was a decided shortage, more pronounced in the east than in the west. Thus, of the eastern stations, some had aggregates of less than half an inch; several, such as Arbroath, Dundee, and Duns, less than one-fifth of their normal rainfalls; and many others only from one quarter to one half. The greater part of the month's rainfall was registered before the 12th, and rainy spells occurred also about the 17th, 23rd, and 30th. On the East Coast, however, but little rain fell after 17th.

TABLE X.—Monthly Mortality, Mean Temperature, and Mean Rainfall in Scotland during 1905, compared with the Mean of the Ten Years 1891-1900.

	YEAR 1905.				1891–1900.		
MONTHS.	Mean Temperature.	Mean Rainfall.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.	Mean Rainfall.

YEAR	46·7	35·68	74,526	12,000	12,000	46·4	40·16

A north-west gale, with very high tides, occurred on 6th and 7th
14th to 17th strong and destructive southerly to easterly gales were
continuous; and on the night of the 30th the weather was again s
Snow in most districts about 9th and 16th. Thunder at Lo
Rothesay, and Paisley on 9th; and at Glencarron, Edinburgh, and
on 12th. Bright sunshine deficient in Orkney; but about or abo
average in other districts. A fine display of Aurora observed in
and Shetland on 5th.

The month of *February* was characterised by a high mean baro
pressure; a high mean temperature, with a rather high mean daily
a low mean humidity; a slightly low mean rainfall, with two more t
average number of rainy days; a large excess of winds of averag
from W. and N.W.

The mean barometric pressure was 29·949 inches, or 0·103 inch
the normal. The Leith barometer at sea-level was above 30 inche
3rd to 5th, from 7th to 15th, and from 20th to 23rd, the extreme
being 30·699 inches on 21st and 28·689 inches on 27th; on 26th an
the barometer remained continuously below 29 inches.

The mean temperature was 39°·2, or 1°·0 above the normal, the day
1°·4 and the nights 0°·6 above their respective averages. Temperat
0°·6 below the average at Fort-Augustus, but in most districts the m
the month was high, most of the more southerly stations having an
of 1°·5 or more. A good deal of mild weather was experienced, and
were no prolonged occurrences of frost. Temperature was somewh
on 2nd; but on 5th, Aberdeen and Crathes, with readings of 57°·
warmer than places in the South of England and Channel Isles. V
temperatures occurred on night of 11th, Marchmont reporting 19
Leadhills 16°·0, and again between 20th and 24th, the night of 21st
especially cold. The warmest days were the 5th, and between 13
18th. The absolute maximum was 57°·3 at Clathick on 14th, a
minimum 11°·1 at Kingussie on night of 21st.

The mean rainfall was 2·77 inches, or 10 per cent. below the
There was a decided shortage in the eastern half of the countr
Peterhead to Berwick, a less pronounced deficiency in central Pert
the Clyde area and the Southern Counties, and in other districts a
more or less above the average but largely in excess towards the
In east and south-east many stations had less than half their
amounts, and about a dozen had aggregates of less than 1 inch.
other hand, Lairg had an excess of 80 per cent., and Stornoway,
carron, and Fort-Augustus of more than 40 per cent. There was a
dry spell from 21st to 23rd, and in the east practically no rain fe
2nd to 11th. The last few days of the month were very wet, Laud
Loch Sunart, reporting 2·39 inches on 25th. Glencarron had 1·38 i
3rd, and heavy falls occurred at many places between 12th and 18th

The weather was stormy on 1st, 18th, and 19th, and very un
towards the end of the month. Hail, sleet, and snow were of
frequent occurrence, but the falls were generally slight. Thunder a
on 1st, in Mull on 2nd, at Paisley on 11th, and at Glasgow o
Bright sunshine in general above the average, but below at Deerne
Marchmont. An Aurora observed in Shetland on 1st and 13th.

The month of *March* was characterised by an extremely low
barometric pressure; a high mean temperature, with a mean daily

about the average; a mean humidity, nearly equal to the average; a very high mean rainfall, with a large number of rainy days; a large excess of moderate winds from between S.E. and W.

The mean barometric pressure was 29·544 inches, or 0·265 inch below the normal. At Leith the barometer at sea-level was above 30 inches only from 2nd to 4th and on the evening of 31st, whilst it was below 29 inches on 11th and 12th and from 14th to 16th. During the passage of a very deep depression on the 15th the Leith barometer at noon fell as low as 28·381 inches.

The mean temperature was 41°·9, or 2°·3 above the normal, the days being 2°·2 and the nights 2°·4 above their respective averages. Temperature was decidedly above the normal in all districts, and at a few stations frost in shade was not recorded. Lowest temperatures were in general registered on the night of the 2nd, though at some places on the nights of 9th, 17th, or 21st. The mildest weather of the month was experienced from about 19th to 23rd, highest temperatures as a rule occurring on 22nd, when readings above 60°·0 were noted at Paisley, Glasgow, Dunfermline, in the Lothians and Border Counties, and at Dumfries. The absolutely highest temperature was 64°·7 at Corstorphine on 22nd, and the lowest 16°·4 at Braemar on night of 2nd.

The mean rainfall was 4·14 inches, or 42 per cent. above the normal. At Duns, rainfall was just equal to the average; and at Marchmont, Wolfelee, and Glencarron there was only a trifling excess, but the general rainfall of the country was greatly above the normal. Lednathie and Fearn had two and a half times their average amounts; and at Dunrobin, Keith, Kingussie, Braemar, Montrose, Comrie, Stobo, and Drumlanrig there was an excess of 80 per cent. or over. The weather was unsettled and wet from 3rd to 17th, with heavy falls on several days, Dunrobin registering 1·58 inch and Glencarron 1·39 on 11th, and Leadhills 2·09 on 15th. Rain was again frequent in most districts after 23rd, with heavy falls on 23rd and 25th, Lednathie having 1·91 inch on the latter day, and Aberdeen 0·94. The rainfall was in great contrast to the small amounts for January and February, the aggregate for these two months at a good many eastern stations being less than the total for March.

On 15th a gale of great severity was experienced from S. and S.S.E. Showers of hail and sleet were frequent during the earlier half of the month. Thunder at Rothesay on 10th, at Dumfries on 12th, at Cally on 14th, at Leadhills on 15th, in east and south-east generally on 23rd, and at several places on some later day. Bright sunshine above the average on the east coast, below on the west, and very deficient in Orkney. An Aurora observed at several western stations on 2nd, and in Shetland on 6th, 9th, 15th, 29th, and 31st.

The month of *April* was characterised by a rather low mean barometric pressure; a low mean temperature, with a low mean daily range; an average mean humidity; a rather high mean rainfall, with a somewhat large number of rainy days; an excess of moderate winds from N.W. and N.

The mean barometric pressure was 29·803 inches, or 0·080 inch below the normal. The most important depressions occurred about 4th, 10th, 28th, and 30th, whilst at Leith the barometer at sea-level was above 30 inches on 1st, 2nd, 6th, and from 16th to 22nd, the extremes there being 30·287 inches on 17th and 29·223 inches on 30th.

The mean temperature was 42°·0, or 2°·1 below the normal, the days being

2°·7 and the nights 1°·4 below their respective averages. Temperature was decidedly below the average in all districts, and a great deal of very cold weather was experienced, especially during the first half of the month. The coldest period was from 6th to 9th, when the temperature at many stations failed to reach 40°·0 on one or more days. The night of the 7th was nearly everywhere the coldest of the month, the minimum at Balruddery, Leadhills, Wolfelee, Drumlanrig and Cally falling to 20°·0 or under. In central and northern districts the 4th was as a rule the warmest day, but towards the south temperature was highest between 13th and 15th, whilst a few stations had their maxima towards the end of the month. The absolutely highest temperature was 63°·4 at Cally on 30th, and the lowest 16°·0 at Leadhills on 8th.

The mean rainfall was 2·68 inches, or 18 per cent. above the normal, the distribution being rather irregular. At Lairg, Arbroath, Edinburgh, and Wolfelee the amounts were about the average, whilst at Dunrobin and in the greater part of the counties of Inverness, Perth, and Fife, there was a shortage of varying amount. On the other hand, Kelso had more than twice its average rainfall, and in the Nith Valley, Berwickshire, part of Aberdeenshire, and at Montrose, there was an excess of 50 per cent. or over. Falls of 1 inch or over in a day occurred on the 1st at Lochbuie, Greenock and Leadhills, on 14th at Lednathie, and on 28th at Duns, Marchmont and Broomlands, the largest of these being 1·43 inch at Duns on 28th. The last few days of the month were very unsettled and wet. Lairg and Tillypronie had as many as 26 days with rain, and the only stations with more than six consecutive dry days were Clathick, Dunfermline, Glasgow and Bothwell, where no rain fell from 18th to 25th.

A good deal of snow fell between 5th and 9th, the storm being of considerable severity in the north, and about the end of the third week the weather was again of a very wintry character. Thunder on 15th at Buchlyvie, Rothesay, Leadhills, Stobo, Broomlands, Wolfelee, and Drumlanrig. Bright sunshine below the average, especially towards the south-east. An Aurora was observed in Shetland on 1st, 3rd, and 9th.

The month of *May* was characterised by an extremely high mean barometric pressure; a somewhat high mean temperature, with a slightly high mean daily range; a rather low mean humidity; a low mean rainfall, with 1 less than the average number of rainy days; an excess of moderate winds from W. and N.W.

The mean barometric pressure was 30·095 inches, or 0·151 inch above the normal. At Leith the sea-level pressure remained continuously above 30 inches from 3rd to 22nd, the highest reading there being 30·449 inches on 5th, and the lowest 29·109 inches on 1st, the weather at the beginning of the month being affected by the passage of a depression of considerable intensity.

The mean temperature was 49°·6, or 0°·6 above the normal, the days being 0°·8 and the nights 0°·5 above their respective averages. Temperature was decidedly above the normal over an area stretching from the Grampians towards the south-west, but a good many stations differed but little from their means, whilst towards the north-west and north-east the
was slightly colder than usual. Low temperatures ruled about the
thereafter until the 20th, warm weather was experienced. Under
nce of winds from north and north-east an exceedingly cold spell
for a few days from 21st with low day temperature and sharp

ground frosts. Thus Aberdeen had a maximum below 50° on 21st, 22nd and 25th, whilst even at Dumfries and Cally frost in shade was reported. Highest temperatures occurred generally about 17th, but in east and south-east more usually towards the end of the month. The absolutely highest temperature was 78°·0 at Stronvar on 17th and at Poltalloch on 19th, and the lowest 24°·0 at Leadhills on 22nd.

The mean rainfall was 1·76 inch, or 23 per cent. below the normal. In parts of the counties of Banff, Ross, Inverness and Argyll there was a moderate excess, but over the greater part of the country a decided deficiency, which was most pronounced in the Lothians and Border Counties. Thus the Lothians had less than half, and Berwickshire only about one-third of their normal rainfalls. In general the month was the driest May since 1896. In some districts the earlier part of the month was unsettled and on 10th Lochbuie had a fall of 1·50 inch; but the chief feature of the month was an all but absolute period of general drought from 13th to 22nd, whilst at Cupar no rain fell until 24th and at Crathes none from 2nd to 23rd. Thereafter the weather was wet with heavy falls between 24th and 29th, Dumfries registering 1·37 inch on 28th.

Hail at a few places early in the month, and thunder at Stobo on 13th, Deerness on 29th, and Fort-Augustus on 31st. Fog general in east and north from 13th to 19th and towards south-west at end of month. Sunshine below the average, except towards north-west. For the week ending 27th, Edinburgh had an aggregate of only 15 hours.

The month of *June* was characterised by a rather high mean barometric pressure; a high mean temperature, with a very high mean daily range; a low mean humidity; a very low mean rainfall, with a remarkably small number of rainy days; a very large excess of moderate winds from an easterly quarter.

The mean barometric pressure was 29·982 inches, or 0·036 inch above the normal. At Leith the sea-level pressure was above 30 inches from 5th to 14th and from 22nd to 26th, the extremes there being 30·429 inches on 23rd and 29·663 inches on 2nd.

The mean temperature was 56°·0, or 1°·1 above the normal, the days being 2°·0 and the nights 0°·3 above their respective averages. Except at some eastern stations the month was much warmer than usual, and towards the west the temperature was at places from 2°·0 to 4°·0 above the normal. The month opened with fairly high temperatures, followed by a cold spell until 12th with winds from north-east. Thereafter temperature was much higher, though in the east the only really warm weather experienced was on one or two days towards the end of the month. In general the coldest days were 7th, 11th and 12th, some unusually low temperatures occurring, and Crathes and Lednathie reporting frost in shade on 11th. Almost everywhere the warmest days were from 23rd to 27th, Dumfries and Cargen recording shade maxima above 80°·0 on each of these five days. The absolutely highest temperature was 85°·0 at Buchlyvie on 25th, and the lowest 31°·3 at Crathes on 11th.

The mean rainfall was 1·19 inch, or 53 per cent. below the normal, being the smallest June rainfall since 1891. At Kingussie there was a slight excess and Drumlanrig had nearly its average rainfall, but over the country generally there was a most pronounced deficiency. At Bothwell and in parts of East Lothian and Berwickshire the aggregate was less than half-an-inch, and nearly one-half of the stations had falls of less than 1 inch

Deficiencies of from 40 to 60 per cent. were common, and at several places, such as Gordon Castle, Glasgow, and Duns, the shortage was at least 75 per cent. Rain was more or less general until 3rd or 4th; an absolute drought then set in, lasting until 17th, when heavy rains became general until 20th. Thereafter in most western districts no rain fell, whilst towards the close of the month thunderstorms in central and eastern Scotland were associated with heavy rainfalls. The largest daily amounts were 1·05 inch at Stronvar on 19th, 0·96 at Glencarron on 26th, 0·94 at Kingussie on 27th, and 0·92 at Cargen on 20th.

A thunderstorm of great severity took place in the Lochaber district on 23rd and 24th, and a destructive "wash-out" occurred at Tulloch on the West Highland Railway. Thunderstorms in east and north about 26th and 27th followed somewhat irregular courses, and the accompanying rains were very local. The amount of sunshine was unusually large, especially in the west. During the latter part of the month fog was somewhat prevalent in the east and north, especially between 24th and 27th.

The month of *July* was characterised by a rather high mean barometric pressure; a high mean temperature, with a high mean daily range; a low mean humidity; a low mean rainfall, with one more than the average number of days with rain; a large excess of moderate westerly winds.

The mean barometric pressure was 29·950 inches, or 0·058 inch above the normal. There was no long continued period of high pressure, but the sea-level pressure at Leith was above 30 inches on 1st, 3rd, 4th, from 6th to 9th, on 13th and 14th, from 19th to 21st, and on 28th, the extremes there being 30·219 inches on 19th and 29·570 inches on 29th.

The mean temperature was 59°·1, or 1°·8 above the normal, the days being 2°·5 and the nights 1°·2 above their respective averages. The month was the warmest July since 1901, but much less warm than that month which had a mean temperature of 61°·8. All districts were warmer than usual, nearly all by at least 1°·0 and several southerly stations by as much as 3°·0. Readings of 80°·0 or over were noted at Crathes on 7th, at several southerly stations on 9th, at Perth on 10th, at Clathick on 11th, at Smeaton on 14th, and in Dundee district on 21st. In general the week ending 15th was the warmest of the month, whilst lowest temperatures occurred during the first week, on 19th, or from 27th to 29th. The absolutely highest temperature was 85°·0 at Stobo on 9th, and the lowest 38°·2 at Kingussie on 19th.

The mean rainfall was 2·57 inches, or 18 per cent. below the normal. At Deerness and in Shetland there was an excess, as also to a trifling degree at a few mainland stations such as Glencarron, Peterhead, Helensburgh, and Bothwell. In general, however, there was a decided deficiency, less than half the normal being registered in parts of the counties of Inverness, Forfar, Perth, Peebles, Kirkcudbright, and Dumfries. Heavy falls occurred on the east coast on 2nd, Smeaton registering 1·01 inch, .and we note a fall of 1·65 inch at Laudale, on Loch Sunart, on 9th, and falls of one inch or more at Bothwell on 9th, at Dumfries on 16th, and at Lochbuie on 11th, 21st, and 29th, the weather being unsettled around these various
dates. On the east coast practically no rain fell from 6th to 10th, whilst
th
er of days with rain ranged from 26 at Lairg, and 23 at Glen-
nly 8 at Montrose.

hunderstorm was general on 9th, with heavy rains in places,
re minor occurrences in various districts on other days. At

Marchmont thunder was reported on 6 days, and at Leadhills, Aberdeen, and Crathes on 5 days. Sunshine above the average, especially towards the south-east, Marchmont having 1½ hour a day more than the normal. A good deal of fog on 2nd, from 9th to 14th, and from 20th to 22nd.

The month of *August* was characterised by a slightly low mean barometric pressure; a rather low mean temperature, with a fractionally low mean daily range; a rather low mean humidity; a mean rainfall a little above the normal, with 3 more than the average number of days with rain; a slight excess of winds of average strength from north-east and from west.

The mean barometric pressure was 29·809 inches, or 0·047 inch below the normal. Depressions of some depth occurred on 19th and 28th, whilst at Leith the sea-level pressure was above 30 inches from 12th to 17th, and on 30th and 31st, the extremes there being 30·240 inches on 30th, and 29·337 inches on 19th.

The mean temperature was 55°·5, or 1°·0 below the normal, the days being 1°·2 and the nights 0°·9 below their respective averages. In Midlothian and at Poltalloch, Lochbuie and Deerness, the month was of fully average warmth, but in most districts there was a decided temperature deficiency, amounting at Fort-Augustus to as much as 2°·4. No spell of markedly cold or warm weather occurred, temperature varying with the direction of the wind. At most stations south of the Grampians the 31st was the coldest day of the month, but towards north-west and north lowest readings occurred usually about 9th, 15th, or 24th. Highest readings were noted between 2nd and 4th, 14th and 17th, or 22nd and 24th. The absolute maximum of 75°·5, at Dumfries on 15th, was low for the month of August, but the minimum, 32°·0 at Lednathie on 31st, about the average.

The mean rainfall was 3·93 inches, or 7 per cent. above the normal. The distribution was rather irregular, the variations ranging from an excess of 40 per cent. at Dumbarton to a deficiency of 40 per cent. at Cupar. There was a slight shortage in Moray and Nairn and in parts of the counties of Inverness, Forfar, Fife, and Dumfries, whilst the excess was most decided around the Clyde estuary and towards the south-west. Some heavy falls were reported, and we may note the following:—1·24 inch at Lednathie on 3rd, 1·57 at Poltalloch and 1·38 at Greenock on 4th, 1·17 at Dumbarton on 7th, and 1·18 at Glencarron on 16th. Stronvar registered more than 1 inch on 4th, 17th and 18th. In southern districts there was a dry spell from 12th to 16th, and in northern from 14th to 16th; also towards north-east from 22nd to 25th.

Thunder at many stations on one or more days, Duns reporting it on the 4th, 10th, and 23rd, Glasgow on 4th, 6th, and 21st, Balruddery on 4th, 9th, and 11th, and Aberdeen on 1st and 22nd. Sunshine below the average on the mainland but slightly above it at Deerness. The weather of the month was on the whole extremely unsettled, especially around 19th and 26th, when the wind force became rather high.

The month of *September* was characterised by a slightly high mean barometric pressure; a slightly low mean temperature, with a slightly low mean daily range; a low mean humidity; a low mean rainfall, with 1 more than the average number of days with rain; a slight excess of winds of average force from N.E.

The mean barometric pressure was 29·905 inches, or 0·052 inch above the normal. Cyclonic disturbances were frequent early in the month, and on 7th the barometer fell to 29·0 inches in the North of Scotlan Leith the sea-level pressure was above 30 inches from 14th to 17th, 20th to 23rd, and from 28th to 30th, the extremes there being inches on 17th and 29·150 inches on 7th.

The mean temperature was 52°·2, or 0°·6 below the normal, the days 0°·9 and the nights 0°·4 below their respective averages. At a few sc stations, such as Leith, Aberdeen, and Inverness, temperature was e or above the average, but at most, and particularly towards the sout the month was colder than usual. Some fairly high temperatures o early in the month, especially on 3rd and 4th, but after the 9th the w was markedly cooler with lowest readings in most districts on 21st, a good many stations, including Crathes, Perth, Broomlands, and Dr rig, registered frost in shade. The absolutely highest temperatu 71°·0 at Arbroath on 3rd and Dumfries on 4th, and the lowest 27°·0 at on 21st.

The mean rainfall was 2·76 inches, or 22 per cent. below the norm Berwickshire and at Poltalloch the average amount was recorded, Glencarron had an excess of 30 per cent. and Airds, with more t inches for the month, nearly twice its normal. But in most distric was a large deficiency, which was perhaps most marked in the cou Forfar, Perth, Fife, and Dumfries, these having only about half their a rainfalls. The first ten days of the month were very wet with hea in the west. Thus Glencarron registered more than 1 inch on 1s 7th, 9th, and 10th, whilst we may note a fall of 1·00 inch at G observatory on 6th, at Fort-William 1·41 on 9th, and at Glenquoi on 3rd and 2·03 on 8th. From 13th until the end of the month bu rain fell in the west, but in the east some considerable falls too after the 23rd, and on 26th and 27th heavy falls in East Lothi Berwickshire caused damage to crops.

Thunder at Duns on 5th, at Braemar on 7th, and at Lednathie 6th, and 7th. Sunshine above the average especially towards the From 1st to 10th strong S.W. winds prevailed. Thereafter the was of a settled character until about the 23rd, after which N.E. adversely affected conditions in the east. Auroras observed in Shetl 5th, 18th, 19th, 22nd, and 25th.

The month of *October* was characterised by an extremely high barometric pressure; an extremely low mean temperature, with mean daily range; a low mean humidity; a slightly low mean rainfa one more than the average number of days with rain; a very large e moderate winds from N.W. and N.

The mean barometric pressure was 29·970 inches, or 0·156 inc the normal. A deep depression influenced the weather around 3rd a and depressions of varying depth were in evidence from 25th o At Leith the sea-level pressure was above 30 inches from 6th to 13 from 18th to 25th, the extremes there being 30·519 inches on 10 29·060 inches on 30th.

The mean temperature was 43°·7, or 2°·8 below the normal, the day 2°·3 and the nights 3°·4 below their respective averages. The mo the coldest October since 1896, the nights being especially cold, temperature deficiency well marked in all districts. Some fairly weather was experienced during the second week, but thereafter unti 25th temperature remained exceedingly low under the influence of no winds; indeed in some districts the week ending 21st had a mean temperature as much as 7°·0 below the average. About one-third of the stations had shade temperatures below 25°·0 on one or more days between 16th and 20th, and Perth, for example, had frost in shade each day from 15th to 25th. The absolute maximum was 67°·0 at Arbroath on 9th, and Clathick on 10th, and the minimum 19°·0 at Leadhills on 16th, and Stronvar on 20th. We note also shade readings of 20°·0 at Drumlanrig on 20th, and Kilmarnock on 22nd.

The mean rainfall was 3·64 inches, or 10 per cent. below the normal. In the Moray Firth area and in the extreme northerly counties rainfall was above the average, the excess in Banffshire being very large, as much as 83 per cent. at Gordon Castle. At Aberdeen, Braemar, Arbroath, Smeaton, Broomlands, and Cally the normal amount was registered, but elsewhere there was a shortage of varying amount. Glencarron had 30, Deerness 29, and Gordon Castle 27 days with rain. Heavy falls occurred in the west on 3rd, Bowhill (Ayrshire) having 1·75 inch, Lochbuie 1·54 inch, and Fort-William 1·37 inch. Heavy falls were registered also at the end of the month, Inverness, Braemar, Arbroath, and Lednathie all having 1 inch or more on 30th or 31st. Except in the northern and south-eastern districts hardly any rain fell between 16th and 24th.

The weather was of an unsettled character early in the month and towards the close, with showers of snow, sleet, or hail in many districts between 14th and 20th. Thunder occurred at Braemar, Marchmont, and a few other stations on 30th. Sunshine was of irregular distribution, but the third week was everywhere exceptionally sunny.

The month of *November* was characterised by an extremely low mean barometric pressure; a low mean temperature, with a somewhat low mean daily range; a mean humidity about the average; a very high mean rainfall, with a large number of days with rain; a large excess of moderate winds from an easterly quarter.

The mean barometric pressure of 29·632 inches, or 0·202 inch below the normal, was the lowest mean for November since 1883. Depressions were frequent and considerable, the deepest occurring on 26th, when the sea-level pressure in the south of Scotland fell to 28·7 inches. At Leith pressure reached 30 inches on 8th, 9th, 17th, 18th, 20th, 21st, and 29th, the extremes there being 30·245 inches on 17th, and 28·703 inches at 4 p.m. on 26th.

The mean temperature was 39°·8, or 1°·1 below the normal, the days being 1°·4 and the nights 0°·8 below their averages. The temperature deficiency was well marked in nearly all districts, and, on the whole, the month was the coldest November since 1893. Some fairly mild weather was experienced early in the month, but about the middle of the third week there set in a frost of unusual severity for the time of year. On the night of 17th the sheltered minimum at Braemar fell to 5°·2, and on the following night shade readings of 15°·0 or under were noted at several stations, including Kingussie, Lednathie, and Drumlanrig. There was a rapid recovery of temperature after this cold spell, with high readings on 22nd and 23rd. The absolutely highest temperature was 56°·5 at Leadhills on 3rd, and the lowest 5°·2 at Braemar on the night of 17th.

The mean rainfall was 5·07 inches, or 33 per cent. above the normal. At Kingussie, in the extreme west, and in parts of the southern counties, the amounts were below or just equal to the average, but in nearly all other districts there was a large excess, which was very pronounced towards the north-east. Thus, Keith, Tillypronie, and Montrose had more than twice their usual amounts, whilst the largest total reported was 9·41 inches at Crathes (Kincardine), 2·25 inches falling there on 11th. Very wet spells occurred, especially in the east, from 1st to 7th, and from 10th to 14th. The west coast rainfall was heavy from 22nd to 26th, and the 26th a very wet day in all districts. We may note falls of 2·02 inches at Bendamph (Loch Torridon) on 22nd, and 2·05 inches at Lochbuie (Mull) on 26th.

The weather of the month was of a most variable character, the early days being stormy in the north, and gales general around 13th and 26th. Snow fell in most districts during the cold spell towards the end of the third week. Sunshine was rather above the average. Thunder occurred at Leadhills on several days, and in Orkney and at some north-eastern stations on some one day. On the night of 15th, an unusually brilliant display of Aurora was generally observed, the colours being described by the Deerness observer as "scarlet and orange."

The month of *December* was characterised by an extremely high mean barometric pressure; a notably high mean temperature, with a low mean daily range; a mean humidity about the average; an extremely low mean rainfall, but with the average number of days with rain; a large excess of south-westerly winds of about average force.

The mean barometric pressure of 30·010 inches, or 0·230 inch above the normal, was the highest mean for December since 1890. The most important depressions appeared between 5th and 9th, and at the very end of the month, and at Leith there were only nine days on which sea-level pressure failed to reach 30 inches, the extremes there being 30·883 inches on 12th and 29·380 inches on 6th.

The mean temperature was 42°·1, or 4°·0 above the normal, the days being 3°·5 and the nights 4°·6 above their respective averages. The temperature excess was well marked in all districts, and within the last thirty years only in 1898 and 1900 has the mean for December been higher. The only important interruptions of cold were experienced about 12th and 13th, and again at the very close of the month, when south-easterly winds displaced the prevailing south-westerly air currents to which the remarkable mildness of the month was due. It is noteworthy that the mean temperatures of both day and night were above those for November, and that of the nights above even that of October. The absolutely highest temperature was 58°·9 at Loanhead (Logie Coldstone) on 20th, and the lowest 14°·0 at Lednathie on 12th.

The mean rainfall was 2·77 inches, or 33 per cent. below the normal, and the month was, on the whole, the driest December since 1892. Only a few isolated stations approached their average amounts, but the deficiency was more marked in the east than in the west, and greatest in north-eastern and south-eastern districts. Some stations registered less than 1 inch, and Gordon Castle and Duns had only about one-fifth of their usual amounts. The rainiest periods were from 5th to 8th, and from 19th to 24th, and we may note the [illegible] wing heavy falls:—1·39 inch at Stronvar on 5th, 1·63 at Fort-Willi [illegible] 0th, and on 24th, 1·31 at Kilmarnock, and 1·12 at Drumlan [illegible]

The v [illegible] ormy on 30th and 31st, and rather stormy between [illegible] and [illegible] der at a few western and northern stations on 7th or 8th. At only a few stations was snow, sleet, or hail recorded. Sunshine was above the average in the east, but deficient in the west and in the Orkneys.

I have the honour to be,

Sir,

Your most obedient Servant,

JAMES C. DUNLOP.

General Registry Office of Births, &c.,
Edinburgh, *20th June*, 1907.

APPENDIX.

ON THE INFANTILE MORTALITY IN THE COUNTIES AND TOWNS OF SCOTLAND SINCE THE INSTITUTION OF NATIONAL REGISTRATION, 1855, BY J. C. DUNLOP, M.D.

In the earlier years of the publication of these reports which deal with the national statistics, infantile mortalities were not expressed as so many per thousand living children born, as is now the custom, and to make good this omission the deaths of children in each of the counties and principal towns has been compared with the number of births registered in them in each year since national registration was instituted, and the results are shown in the annexed Table (No. XI.). The infantile mortality rates of Scotland and of the groups of registration districts were published in the Decennial Supplement to the Forty-Eighth Detailed Annual Report of the Registrar-General, and are given in Table 29 of this Report. In this appendix all rates are expressed as per thousand living children born.

The infantile mortality of Scotland for the period previous to 1860 was 119·6 per thousand births, from 1861 to 1870 it was 121·1, between 1871 and 1880 it was 122·7, between 1881 and 1890 it was 119·0, between 1891 and 1900 it was 127·9, and since 1901 it has ranged between 113·4 and 129·4.

In Shetland the infantile mortality during the entire period, 51 years, has been low; in 1897 it was 45, in 1889 and 1904 it was 46, and in all the remaining years, 1866 and 1881 excepted, it was less than 100. In 1866 it was 102, and in 1881 it was 104. The rate of each decennial period above referred to was between 60 and 70, and since 1901 it has ranged between 46 and 75.

In Orkney, as in Shetland, the infantile mortality has been low, it having ranged from 25 in 1905, 32 in 1868, and 36 in 1874, to 89 in 1904, and 77 in 1875 and 1891. The infantile mortalities of the decennial periods have varied from 46 in the period 1861 to 1870, to 62 in the period 1891 to 1900. Since 1901 it has ranged from 25 in 1905 to 89 in 1904.

In Caithness the infantile mortality has also been low, the extremes being 58 in 1858, and 128 in 1897. The rate for the period previous to 1860 was 76, between 1861 and 1870 it was 81, between 1871 and 1880 it was 85, between 1881 and 1890 it was 95, and between 1891 and 1900 it was 98. Since 1901 it has ranged between 93 and 117. The rate of this county, unlike those of Orkney and Shetland, appears to be an increasing quantity.

The infantile mortality rate of Sutherland has been more like those of Shetland and Orkney than like that of Caithness, for it has been low, and shows no indication of increase. The extremes in this county were 53 in 1872, 56 in 1898, and 107 in 1899. The rates of the decennial periods have ranged between 73 and 78, and the annual rates since 1901 have ranged between 71 and 90.

In Ross and Cromarty the infantile mortality rate resembles that of Sutherland; it is low and not increasing. The extremes were 62 in 1888,

rate ranged between 77 and
and 105.

ty has been low. It has ranged between 76
n 1899, and 117 in 1876. In the period
1861 and 1870 it was 95, between 1871

and 1880 it was 100, between 1881 and 1890 it was 94, and between 1891 and 1900 it was 97. Since 1901 it has ranged between 91 and 93.

In Fife the infantile mortality rate has been an increasing quantity. Before 1860 it was 95, between 1861 and 1870 it was 99, between 1871 and 1880 it was 107, between 1881 and 1890 it was 107, and between 1891 and 1900 it was 117. Since 1901 it has ranged between 98 and 124. The extremes noted in this county are 84 in 1859, and 130 in 1898.

The infantile mortality in Kinross has been low. Before 1860 it was 83 per thousand, between 1861 and 1870 it was 84, between 1871 and 1880 it was 100, between 1881 and 1890 it was 96, and between 1891 and 1900 it was 88. Since 1901 it has ranged between 69 and 105. During the entire period the extremes were 52 in 1863, 55 in 1864, and 150 in 1890.

In Clackmannan the infantile mortality rate has been comparatively high. In the period previous to 1860 it was 107, between 1861 and 1870 it was 127, between 1871 and 1880 it was 126, between 1881 and 1890 it was 116, and between 1891 and 1900 it was 119. The extremes were 66 in 1855, 79 in 1902, and 171 in 1863. Since 1901 it has ranged between 79 and 120.

In Stirling the infantile mortality rate since the commencement has been moderate, but is showing a tendency to increase. Previous to 1860 it was 109, between 1861 and 1870 it was 113, between 1871 and 1880 it was 116, between 1881 and 1890 it was 116, and between 1890 and 1900 it was 122. The extremes were 96 in 1883, the only year in which this rate fell below 100, and 137 in 1893. Since 1901 it has ranged between 100 and 120.

In Dumbarton the infantile mortality rate is moderate. Previous to 1860 it was 112, between 1861 and 1870 it was 118, between 1871 and 1880 it was 115, between 1881 and 1890 it was 110, and between 1891 and 1900 it was 123. Since 1901 it has ranged between 110 and 126. In three years only has this rate fallen below 100, namely, in 1859, 1881, and 1892; the highest rate was 146 in 1893.

In Argyll the infantile mortality has been low. Previous to 1860 it was 81, between 1861 and 1870 it was 81, between 1871 and 1880 it was 82, between 1881 and 1890 it was 75, and between 1891 and 1900 it was 77. Since 1901 it has ranged between 64 and 96. The extremes noted are 59 in 1892, and 96 in 1905.

In Bute the infantile mortality rate in the period previous to 1860 was 110, between 1861 and 1870 it was 108, between 1871 and 1880 it was 103, between 1881 and 1890 it was 110, and between 1891 and 1900 it was 91. Since 1901 it has ranged between 77 and 106. The extremes were 62 in 1894, and 144 in 1882.

In Renfrew the infantile mortality rate has been high, but is showing a tendency to diminish. In the period previous to 1860 it was 146, between 1861 and 1870 it was 141, between 1871 and 1880 it was 134, between 1881 and 1890 it was 126, and between 1891 and 1900 it was 126. Since 1901 it has ranged between 103 and 123. The extremes were 103 in 1905, and 158 in 1875.

In Ayr the infantile mortality rate has been moderate. In the period before 1860 it was 114, between 1861 and 1870 it was 108, between 1871 and 1880 it was 115, between 1881 and 1890 it was 110, and between 1891 and 1900 it was 118. Since 1901 it has ranged between 99 and 116. The extremes were 91 in 1859, and 130 in 1895. In four years only was the rate less than 100.

Lanark is the county which has been subject to the highest infantile mortality rates. In the period previous to 1860 it was 155 per thousand births, between 1861 and 1870 it was 149, between 1871 and 1880 it was 145, between 1881 and 1890 it was 136, and between 1891 and 1900 it was 143. Since 1901 it has ranged between 125 and 147. The extremes were 118 in 1879, and 168 in 1871.

Linlithgow is a county with a somewhat high infantile mortality rate. In the period previous to 1860 it was 114, between 1861 and 1870 it was 125, between 1871 and 1880 it was 121, between 1881 and 1890 it was 117, and between 1891 and 1900 it was 128. Since 1901 it has ranged between 97 and 127. The extremes were 96 in 1857, and 152 in 1897. In three years only was this rate less than 100.

In Edinburgh the infantile mortality rate has been high. In the period previous to 1860 it was 139, between 1861 and 1870 it was 137, between 1871 and 1880 it was 134, between 1881 and 1890 it was 130, and between 1891 and 1900 it was 138. Since 1901 it has ranged between 116 and 143. The extremes were 117 in 1859, and 161 in 1858.

In Haddington the infantile mortality rate has been moderate. In the period previous to 1860 it was 104, between 1861 and 1870 it was 100, between 1871 and 1880 it was 99, between 1881 and 1890 it was 94, and between 1891 and 1900 it was 110. Since 1901 it has ranged between 91 and 126. The extremes were 69 in 1859, and 131 in 1898.

Berwick is a county with a low infantile mortality rate. In the period previous to 1860 it was 81, between 1861 and 1870 it was 91, between 1871 and 1880 it was 91, between 1881 and 1890 it was 89, and between 1891 and 1900 it was 103. Since 1901 it has ranged between 81 and 110. The extremes were 58 in 1857, 67 in 1855, and 127 in 1891.

Peebles is another county with a low infantile mortality rate. In the period previous to 1860 it was 75, between 1861 and 1870 it was 94, between 1871 and 1880 it was 107, between 1881 and 1890 it was 90, and between 1891 and 1900 it was 95. Since 1901 it has ranged between 61 and 99. The extremes of the entire period since 1855 were 57 in 1859, and 138 in 1897.

In Selkirk the infantile mortality rate has been moderate. In the period previous to 1860 it was 95, from 1861 to 1870 it was 126, from 1871 to 1880 it was 124, from 1881 to 1890 it was 108, from 1891 to 1900 it was 118. From 1901 to 1905 it varied between 87 and 118. The extremes were 56 in 1856, and 158 in 1871.

In Roxburgh the infantile mortality rate has also been moderate. In the period previous to 1860 it was 110, between 1861 and 1870 it was 113, between 1871 and 1880 it was 110, between 1881 and 1890 it was 114, and between 1891 and 1900 it was 115. Since 1901 it has ranged between 88 and 116. The extremes were 88 in 1902, and 142 in 1887.

In Dumfries the infantile mortality rate has also been moderate. In the period previous to 1860 it was 104, between 1861 and 1870 it was 105, between 1871 and 1880 it was 108, between 1881 and 1890 it was 111, and between 1891 and 1900 it was 109. Since 1901 it has ranged between 98 and 1 he extremes were 94 in 1896, and 127 in 1878.

I bright the infantile mortality rate has been low. In the p to 1860 it was 92, between 1861 and 1870 it was 101, d 1880 it was 96, between 1881 and 1890 it was 98, and 1900 it was 105. Since 1901 it has ranged between 59 mes were 59 in 1902, and 128 in 1896.

nfantile mortality has been low, but is showing a tendency to increase. In the period previous to 1860 it was 87, between 1861 and 1870 it was 95, between 1871 and 1880 it was 93, between 1881 and 1890 it was 93, and between 1891 and 1900 it was 110. Since 1901 it has ranged between 85 and 102. The extremes were 74 in 1857, and 125 in 1892.

The counties which may be described as those with the highest infantile mortality rates are Lanark, Edinburgh, Forfar, and Renfrew, all of them counties with a large proportion of urban population; and the counties which may be described as having low infantile mortality rates are Orkney, Shetland, Caithness, Sutherland, Ross and Cromarty, Kincardine, Perth, Kinross, Argyll, Berwick, and Peebles, all of which are counties with a low proportion of urban population.

This study of the infantile mortality rates, so far as it concerns the principal towns, is not quite complete, for the necessary figures to calculate those rates for the towns of Govan, Partick, and Motherwell are not available for all years. That this is so is due to the fact that Govan and Partick, for statistical purposes, from 1855 to 1880 and from 1892 to 1900 were considered as one town, and between 1881 and 1891 were dealt with along with other districts near Glasgow in what was styled the Glasgow Landward and Suburban Districts. Motherwell has been considered a principal town only since 1901, and since then only are figures available.

In Glasgow the infantile mortality rate has been high. In the period previous to 1860 it was 178, between 1861 and 1870 it was 165, between 1871 and 1880 it was 157, between 1881 and 1890 it was 147, and between 1891 and 1900 it was 149. Since 1901 it has ranged between 130 and 150. These figures show a decided fall, the rate in the later periods being lower than those in the earlier periods. The extremes were 127 in 1878, and 196 in 1855 and 191 in 1871.

In Edinburgh the infantile mortality rate has also been high, but in general not so high as in Glasgow. In the period previous to 1860 it was 148, between 1861 and 1870 it was 144, between 1871 and 1880 it was 137, between 1881 and 1890 it was 131, and in the period 1891 to 1900 it was 142. Since 1901 it has ranged between 121 and 148. The extremes were 119 in 1878, and 170 in 1869.

In Dundee the infantile mortality rate in the period previous to 1860 was 172, between 1861 and 1870 it was 173, between 1871 and 1880 it was 165, between 1881 and 1890 it was 159, and between 1891 and 1900 it was 177. With the exception of the Glasgow rate for the period previous to 1860, these Dundee rates are higher than those of any other of the principal towns. Since 1901 the rate in Dundee has ranged from 133 to 180. The extremes recorded are 218 in 1893 and 208 in 1890, and 133 in 1905.

In Aberdeen the rate was moderate in the earlier periods, but in the later periods it was higher. In the period previous to 1860 it was 127, between 1861 and 1870 it was 132, between 1871 and 1880 it was 131, between 1881 and 1890 it was 133, and between 1891 and 1900 it was 145. Since 1901 it has ranged between 135 and 152. The extremes were 99 in 1869, and 172 in 1866.

In Govan and Partick combined the infantile mortality rate in the period previous to 1860 was 127, between 1861 and 1870 it was 131, between 1871 and 1880 it was 142, and between 1892 and 1900 it was 142. The figures for calculating the rates for the years 1881 to 1891 are not available. The extremes were 100 in 1859, and 160 in 1869 and 1875.

N.B.—Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts conti
Police Burghs or Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.

An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situat
which comprise more, or parts of more, than one Parish. The component parts of these Districts will be found at page 570.

A dagger "†" *is prefixed to those Districts* which consist of only a part of the Civil Parish of the same name.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
	2. Orkney.	
13	Birsay	Part of Harray and Birsay.
14	Deerness	Part of St Andrews and Deerness.
18	Harray	Part of Harray and Birsay.
22	North Ronaldshay	Part of Cross and Burness.
25	St Andrews	Part of St Andrews and Deerness.
26	Sanday	Lady, and part of Cross and Burness.
	3. Caithness.	
37b	Keiss	Parts of Canisbay and Wick.
	5. Ross and Cromarty.	
58	Applecross	(1) Part of Applecross; (2) Remainder of Applecross and part of Gairloch.
59b	Carnoch	Parts of Contin and Urray.
86b	Carloway	Parts of Barvas and Uig.
87	Lochs	Lochs, and part of Uig.
	6. Inverness.	
92b	Cannich	Parts of Kilmorack and Kiltarlity.
112	Kilmuir	(1) Part of Kilmuir; (2) Remainder of Kilmuir, and part of Snizort.
	8. Elgin.	
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbryde.
	9. Banff.	
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrinnes	Parts of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
	10. Aberdeen.	
171b	Ardallie	Parts of Cruden, Ellon, Longside, and Old Deer.
210b	Kininmonth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick.
222b	Millbrex	Parts of Fyvie and Monquhitter.
227b	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
231	Peterculter	(1) Parts of Aberdeen and Peterculter; (2) Remainder of Peterculter.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
249b	Ythan Wells	Parts of Auchterless and Forgue.
	11. Kincardine.	
266	Nigg	Nigg, and part of Aberdeen.
	12. Forfar.	
282	Dundee	Dundee Combination, and part of Mains and Strathmartine.
294b	Kilry	Parts of Glenisla and Lintrathen.
	13. Perth.	
324	Aberfeldy	Parts of Dull, Kenmore, and Logierait.
330	Auchtergaven	Parts of Auchtergaven and Logiealmond.
331	Balquhidder	Balquhidder, and part of Comrie.
344	Dowally	Part of Dunkeld and Dowally.
349	Dunkeld	Part of Dunkeld and Dowally.
355b	Foss	Parts of Blair-Athol and Dull.
361	Killin	Parts of Kenmore and Killin.
375	Logiealmond	Parts of Logiealmond, Little Dunkeld, and Methven.
379	Meigle	Meigle, and part of Coupar-Angus.
386b	Persie	Parts of Alyth, Blairgowrie, and Kirkmichael.
387	Perth	Perth, and part of Kinnoull.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenandry	Parts of Blair-Athol and Moulin.
	14. Fife.	
402	Anstruther-Easter	Anstruther-Easter, and part of Kilrenny.
417	Crail	Part of Crail and May Island.
423	Dunbog	Dunbog, and part of Flisk.
425	Dunino	Dunino, and part of Crail.
426	Dysart	Part of Kirkcaldy and Dysart.
442	Kirkcaldy and Abbotshall	Part of Kirkcaldy and Dysart.
457b	Thornton	Part of Kirkcaldy and Dysart and of Markinch.
	17. Stirling.	
88	St Ninians	Parts of St Ninians and Stirling.
90	Stirling	Parts of St Ninians and Stirling.

CONSTITUTION OF THE DISTRICTS—*continued.*

No.	Districts.	Component Parts (Parishes).
	18. Dumbarton.	
496	Dumbarton . . .	Dumbarton, and parts of Cardross and Old Kilpatrick.
	19. Argyll.	
504	Ardchattan . . .	Part of Ardchattan and Muckairn.
505	Ardnamurchan . . .	(1) Parts of Ardnamurchan and of Arisaig and Moidart.
506	Ballachulish, etc. . .	Parts of Kilmallie and Ardgour.
509	Cumlodden and Minard .	Parts of Glassary and Inveraray.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan, etc. . .	(1) Parts of Kilchrenan and Dalavich, and Glenorchy and Inishail; (2) Remainder of Kilchrenan and Dalavich.
520	Kilmallie	Parts of Kilmallie and Ardgour.
525	Lismore	Lismore and Appin, and part of Ardgour.
526	Lochgilphead . . .	Parts of Glassary and South Knapdale.
529	Muckairn	Parts of Ardchattan and Muckairn, and Glenorchy and Inishail.
535	Tarbert	Parts of Kilcalmonell, Saddell and Skipness, and South Knapdale.
536	Bowmore (or Kilarrow) .	Part of Kilarrow and Kilmeny.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelvie . . .	Part of Pennygown and Torosay.
547	Portnahaven . . .	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and Pennygown and Torosay.
549	Tobermory . . .	Part of Kilninian and Kilmore.
550	Torosay	Part of Pennygown and Torosay.
	20. Bute.	
556	Lochranza	Parts of Kilbride and Kilmory.
	21. Renfrew.	
569*b*	Bridge-of-Weir . . .	Parts of Houston and Killellan, and of Kilbarchan.
572	Neilston	(1) Part of Neilston; (2) Remainder of Neilston, and part of Paisley.
	22. Ayr.	
576	Ardrossan	(1) Parts of Ardrossan and West Kilbride; (2) Remainder of Ardrossan.
578	Ayr	Parts of Ayr and Maybole.
584*b*	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
610*b*	Patna	Parts of Dalmellington, Dalrymple, Kirkmichael, and Straiton.
	23. Lanark.	
622	Barony	Part of Glasgow.
626*b*	Calderhead . . .	Parts of Cambusnethan and Shotts.
644	Glasgow . . .	Parts of Glasgow and Govan Combination.
	25. Edinburgh.	
685	Edinburgh . . .	Parts of Edinburgh and Colinton.
692	Leith	Leith and part of Edinburgh.
695*b*	New Craighall . . .	Parts of Inveresk and Liberton.
698*b*	Stobhill	Parts of Borthwick, Cockpen, and Newbattle.
	29. Selkirk.	
774*a*	Caddonfoot . . .	Caddonfoot, and part of Innerleithen.
	30. Roxburgh.	
787*b*	Edgerston . . .	Parts of Jedburgh and Southdean.
	31. Dumfries.	
813*b*	Brydekirk . .	Parts of Annan, Cummertrees, and Hoddom
830	Holywood	Holywood, and part of Terregles.
853*b*	Wanlockhead . . .	Part of Sanquhar.
	32. Kirkcudbright.	
857*b*	Bargrennan . . .	Parts of Minnigaff and Penninghame.
862	Corsockbridge . . .	Parts of Balmaclellan, Kirkpatrick-Durham, and Parton.
864	Dalbeattie	Part of Urr.
	33. Wigtown.	
899	Stranraer	Stranraer, and parts of Inch and Leswalt.

LIST of REGISTRATION DISTRICTS which include BURGHS, or TOWNS of 2000 Inhabitants and upwards, *or parts thereof*, bearing a different name from the District in which they are situated.

---

* The actual number of Districts is 1073—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 7 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place *compound* names in the order in which they are pronounced.
